1. Cooling capacity is based on 80.6°F db, 66.2°F wb (27/19°C) EAT and 77°F (25°C).
 2. Heating capacity is based on 68°F db, 59.0°F wb (20/15°C) EAT and 32°F (0°C).

SmartSource® Single Stage Horizontal & Vertical Water Source Heat Pumps

Industry Leading Efficiencies, Very Quiet Operation

SmartSource water source heat pumps from Daikin combine industry-leading efficiencies with low-noise operation, high indoor air quality and consistent air temperatures. So now you can do your part to conserve energy and enjoy a quiet and comfortable indoor environment.

Very quiet

SmartSource water source heat pumps are exceptionally quiet, with published sound ratings as low as 46 dBA. Sound reduction packages are available for even greater attenuation. These units

typically operate at low compressor and fan speeds a majority of the time. The result is even quieter operation, very low energy consumption and very uniform room air temperatures.

EC motors are standard on all units, with field-selectable CFM settings. EC motors are more efficient than traditional PSC motors, which is why most utilities offer rebates for their use. EC motors also provide near-constant fan speeds at static pressures up to one inch. The result is improved air filtration capabilities and more uniform air distribution.

Durable construction

Cabinets on all units feature a rugged, texturized, powder-coat paint finish for exceptional durability. Slotted handles make it easy to remove panels for maintenance and service. Cleanable, foil-faced fiberglass insulation is standard in the air-handling section to minimize sound transmission while preventing fibers in the air stream. High-IAQ options include 3/8-inch, closed-cell insulation in both the compressor and air-handling sections.

Wide range of options

Available options on all units include auxiliary electric heat in both internal (vertical units only) and external configurations. MERV 8 and 13 filters are available, with standard 2 inch filter rack or an optional 4 inch filter rack that accept a two-inch or four-inch cartridge. A desuperheater option takes advantage of

waste heat from the compressor to provide domestic hot water, ideal for apartments and condos. Also available is a waterside economizer to minimize mechanical cooling by using cool loop water to condition the space. A hydronic heat option is available to utilize hot loop water temperatures for heating and minimize mechanical heating.

Several methods of dehumidification options are available, including hot gas reheat. For geothermal applications, a unit-mounted loop pump option reduces system complexity by eliminating the need for a central pumping system.

Typical applications for SmartSource water source heat pumps include schools, clinics, office buildings, government offices, senior living facilities and other projects, both new construction and retrofit, where high efficiency is a key specification.

Model GSH-Horizontal & GSV-Vertical Unit

1 EC fan motor:

- 4 field adjustable fan settings and up to 7 operating mode options, provide a wide range of airflow selection (up to 28) for quieter operation and lower energy consumption.

2 High efficiency scroll or rotary compressor:

- available in a variety of commercial voltages, mounted on a double isolation system for reduced sound and vibration.

3 Refrigerant circuit:

- Utilizes R-410A refrigerant with a bi-flow thermal expansion valve for easy metering and four way solenoid reversing valve.

4 MicroTech® III, SmartSource controls:

- Easy open-protocol integration with optional LonWORKS® or BACnet®.

5 Unit status LED:

- Instant visuals on unit operation for easy troubleshooting and advanced diagnostics.

6 4-sides filter rack with standard 2" or optional 4" filters:

- Designed for easy filter maintenance.
- MERV 8 & 13 filter options with gasketed filter rack meet LEED-NC EQc5 applications with leakage rate at less than 4 CFM per square foot of filter area at 0.5" ESP.

7 Stainless steel drain plan:

- Sloped with lipless drain connection for positive condensate flow, meets ASHRAE 62.1 Section 5.11.

8 Flush mounted fittings:

- Easy one wrench connection, securely fastened to the cabinet corner posts.

9 Blower and motor orifice ring:

- Easy service removal without having to remove the blower housing or disconnecting the unit from the duct work.

10 Durable cabinet construction:

- Heavy gauge steel, available with an optional powder coated textured paint, (charcoal bronze), and lined with cleanable foil-faced insulation on the airside.

Four Unique Dehumidification Options:

- **Smart Dehumidification** – Uses hot gas reheat, humidistat, 1-stage thermostat & smart air flow management for precise humidity control. Available on unit sizes 007, 009, and 015 through 070.
- **Simplified Dehumidification** – Uses a 2-stage thermostat to optimize unit capacity and fan speed for maximum latent capacity while decreasing room humidity levels.
- **Humidistat Controlled Dehumidification** – Uses a humidistat and 1-stage thermostat to control room humidity levels.
- **Dehumidification Only** – Uses a humidistat in cooling only mode.

Hot Gas Reheat Coil

For improved indoor climate control, Daikin Applied offers accurate and cost effective dehumidification control using a hot gas reheat option known as smart dehumidification. Hot gas reheat with smart dehumidification is an excellent solution for applications where maintaining low humidity in a space is crucial. With smart dehumidification, once the space temperature is satisfied, the humidistat signal diverts the high temperature refrigerant gas to the reheat coil located downstream of the cooling coil. The conditioned and reheated air prevents over cooling of the space and maximizes moisture removal for improved indoor comfort. The smart ECM fan system adjusts the air flow for optimal moisture removal, and helps keep sound levels at a minimum. It is especially effective during low load conditions when proper control is critical. Under humid conditions (60%RH) and typical loop water temperatures, the latent capacity is optimized for approximately 90% of the sensible capacity.

With loop water conditions of 85°F, the leaving air temperature is approximately the same as the entering air temperature, resulting in effective dehumidification without over cooling the space.

Hydronic Heat

The hydronic heat option helps to reduce energy consumption by using hot loop water temperatures to condition a space without energizing mechanical heating. Hydronic heat can help maximize heat transfer from rooms that require cooling to ones that require heating without the added cost of operating the compressor.

Variable flow pumping systems are recommended for these systems to further reduce energy consumption, while maintaining sufficient water flow during heating operation.

The unit includes a hydronic heating coil located downstream of the unit's evaporator coil and after the filter. When entering water temperatures are between 70° to 120°F, a 3-stage thermostat or room temperature sensor in conjunction with a factory-installed entering water temperature sensor and a 2-position 3-way diverting valve, determine when loop water can be diverted to the hydronic coil and the unit coax coil for hydronic heating. Smart fan controls further reduce energy consumption and sound levels by delivering optimum air flow during hydronic heat operation.

Desuperheater

The factory-installed desuperheater option saves energy by using heat that would otherwise be "wasted" to the water loop, and uses it to supplement the heating of domestic water. The desuperheater has a double-wall, vented coaxial heat exchanger, an optional water pump for 208/230- 1 and 3-phase applications, with controls to temper the make-up water.

Controls include a refrigerant discharge line thermostat, an Entering Water Temperature (EWT) thermostat and an "on-off" switch located on the outside of the unit cabinet to deactivate the desuperheater system during the heating mode.

This option is available on vertical units sizes 2 tons and larger.

Loop Pump(s)

Unit-mounted loop pump(s), available on horizontal and vertical unit sizes 2 tons and larger, eliminate the need for a central pumping station. Several loop pump options are available to match the system flow and head requirements for most geothermal and water loop applications. Sized for approximately 3 GPM/ton, both low and high head options are available in a single or dual (series flow) configuration. The series configuration essentially doubles the head capabilities. A factory supplied transformer is provided for single-point power supply.

Waterside Economizer

The waterside economizer option helps to reduce energy consumption by using cool loop water temperatures to condition a space without energizing mechanical cooling. Even in the coldest weather a space can experience a build-up of ambient heat from people, equipment, lighting and the sun. Buildings with temperature controlled computer rooms, media/resource rooms or medical equipment rooms, benefit from the waterside economizer when the geothermal loop field or cooling tower temperatures are cool enough to provide air conditioning.

Variable flow pumping systems are recommended for these systems to further reduce energy consumption, while maintaining sufficient water flow during economizer operation.

The waterside economizer includes a hydronic cooling coil located upstream of the unit's evaporator coil and after the filter. When entering water temperatures are between 70° to 50°F, a 3-stage thermostat or room temperature sensor in conjunction with a factory-installed entering water temperature sensor and a 2-position 3-way diverting valve, determine when loop water can be diverted to the hydronic coil and the unit coax coil for economizer cooling. Smart fan controls further reduce energy consumption and sound levels by delivering optimum air flow during economizer operation. The MicroTech III SmartSource controller determines if the economizer and mechanical cooling can be activated together, while optimizing unit airflow. The controller also provides low temperature protection to avoid economizer operation when entering water temperatures are below 35°F.

Electric Heat (internal or external)

Factory installed electric heaters are available on vertical units. These heaters are located above the blower housing inside the discharge air plenum. Horizontal units utilize an external duct-mounted electric heater for field-installation. Unit controls are available for boilerless, supplemental, primary or emergency electric heat to serve several different application needs. Boilerless electric heat will be energized when the entering water temperature falls below set point. This will allow electric heat to function while ensuring the compressor remains off. With supplemental electric heat control, the wall thermostat will activate the compressor and heater simultaneously if necessary to maintain room heating conditions. For primary heat applications, only the electric heater will provide heat without energizing the compressor. Emergency heat is activated by a 24V thermostat signal to energize the external duct-mounted electric heat. For available electric heat sizes and voltages see "[Model Nomenclature](#)" on page 3, "Product Code Index", code item "23".

Horizontal unit external duct-mounted electric heater

Vertical unit internal factory-installed electric heater

Designed-in Sound Reduction

Provided as standard, the compressor mount has a unique dual-level vibration isolation system. The compressor is mounted on vibration isolation grommets to a heavy gauge mounting plate, then isolated from the cabinet base with rubber grommets to minimize vibration transfer. The compressor is equipped with thermal overload protection and is located in a well-insulated compartment away from the air stream to minimize sound transmission. All access panels have acoustic seals to eliminate panel vibration and minimize radiated sound levels. Fan noise can be minimized at low airflow with field adjustable EC fan motor settings. An optional sound reduction kit adds a 3/4" thick acoustic foam panel of insulation to the fan section and a compressor blanket (unit sizes 024 to 070 only) to help further reduce operating sound levels.

Cabinet

The SmartSource vertical floor and horizontal ceiling cabinet comes with a standard rugged, textured- non-glare, powder-coat charcoal bronze paint. All cabinetry is fabricated from heavy gauge G-60 galvanized sheet metal.

The vertical floor unit offers two cabinet configurations with 6 unique cabinet sizes that make up the 1/2 through 6 ton vertical heat pump product line. For maximum flexibility, each vertical unit is available in either a left-hand or right-hand return air arrangement to provide the optimum piping location and service access. The mirror image design of the units allow for configuring the system using minimum ductwork and piping. This helps reduce design, material and installation costs.

Horizontal ceiling mounted units offer 6 cabinet sizes in four unique cabinet configurations with the smallest possible footprint, allowing for optimum design flexibility. Ceiling mounted units ship with heavy metal brackets, rubber isolators, fasteners and washers to suspend and isolate the unit from the building.

Cabinet Insulation

Premium type insulation is provided standard with all SmartSource horizontal and vertical unit cabinets providing a high level of indoor air quality. As a standard the compressor compartment surfaces are lined with 1/2" fiberglass skin-face type insulation. Separated from the compressor section by a partition, the airside/blower section comes standard with 1/2" thick fiberglass cleanable foil face insulation to prevent introduction of fibers into the discharge air stream, providing maximum sound attenuation. The standard cabinet insulation meets NFPA 90A requirements, air erosion and mold growth limits of UL-181, fungal resistance test per ASTM-C1071 and ASTM G21, and meets zero level bacteria growth per ASTM G22. All insulation has a flame spread of less than 25 and a smoke developed classification of less than 50 per ASTM E-84 and UL 723.

Optional insulation is available in 3/8" thick closed-cell non fibrous insulation for Indoor Air Quality (IAQ).

A sound reduction package is available in 3/4" thick insulation as a factory installed option. Unit sizes 024 - 070 utilize a sound attenuating compressor blanket, combined with high technology sound material applied within the air handling compartment to further reduce sound transmitted by the unit. Unit sizes 007 - 019 have sound attenuating material in the compressor compartment in lieu of a compressor sound blanket. A compressor sound blanket is not recommended on a unit with a rotary compressor.

Unit Configurations

Figure 1: Two vertical unit configurations

Figure 2: Four horizontal unit configurations

Note: Unit left or right hand is determined by facing the piping connection (front) side of unit

Field Adjustable EC Fan Motor

EC motors are standard on all units, with 4 field-selectable CFM settings and 28 programmed CFM values. EC motors provide the ultimate in efficiency, performance flexibility and reduced sound levels. With inherent high efficiencies compared to conventional PSC or fix speed motors, the EC motor can save operating energy. The factory installed rotary fan speed selection switch allows for easy commissioning through a simple click of the switch to set the CFM delivered to the space. This allows for field adjustment of air delivery to the space for sound sensitive applications or for increased air distribution.

Compressors - Double Isolated

The scroll compressor provides excellent performance and increased efficiency. The compressor has a unique dual-level vibration isolation system. Mounted on vibration isolation grommets to a heavy gauge compressor mounting plate, then isolated from the cabinet base with rubber grommets to minimize vibration transfer. The compressor is equipped with thermal overload protection and is located in an insulated compartment away from the air stream to minimize sound transmission.

Service Connections

Two service valves are located inside the end access panel – one on the low side and one on the high side of the refrigeration circuit – for charging and servicing. All valves are 7/16" SAE fittings.

Water Connections

The water and condensate connections are FPT fittings, securely mounted flush to the corner post to allow for connection to a flexible hose without the use of a back-up wrench. This helps reduce the time required to connect the unit and helps prevent delays due to shipping damage. All vertical units are internally trapped with clear vinyl tubing, to allow inspection of condensate drain.

2-Way Motorized Water Valve

The optional 2-way valve is used for variable pumping applications when more than one unit is installed on a common loop. These valves are also used to conserve water when used for ground water applications.

Horizontal Unit Hanger Bracket

Each horizontal unit is furnished with a mounting kit that includes heavy metal hanger brackets for hanging the unit from field-supplied hanger rods. Rubber isolators are included for sound and vibration attenuation, as are mounting washers, bolts and lock washers. The hangers are attached to fasteners at each corner of the unit, which are an integral part of the cabinet.

Standard hanger bracket
for unit sizes 007-019

Heavy-duty hanger bracket
for sizes 024-070

Stainless Steel Drain Pan

The condensate drain pan is constructed of corrosion-resistant stainless steel. It is wrapped in closed-cell insulation, double-sloped with a "lipless", free-draining pipe connection for positive drainage and an internal trap for improved Indoor Environmental Quality (IEQ) that meets ASHRAE 62.1-2007 Section 5.11. The drain pan is provided with solid-state electronic condensate overflow protection, unlike the less reliable mechanical float switch used with many competitor drain pans. The horizontal unit condensate drain pan is sloped, allowing for the unit to be mounted level in the ceiling, without tilting the unit to encourage drainage as some competitor units require.

Vertical unit drain pan

Horizontal unit drain pan

Air-to-Refrigerant Coil

The air-to-refrigerant heat exchanger is a large face area coil with copper tubes and aluminum fins. The fins are lanced and mechanically bonded to the tubes using finned edges on the inside which expand during assembly to enhance heat transfer capabilities. The maximum working pressure of the heat exchanger is 600 psig (4137 kPa). The coil is designed for optimal performance in both heating and cooling while maintaining the benefit of a compact size. The coils can be coated with an optional inorganic, silicon-based nano-ceramic coating. This coating has a 3,000 hour salt spray rating per ASTM B117.

Refrigeration System

Units have a coaxial heat exchanger with a copper inner tube and a steel outer tube. The air coil is a large face area coil with copper tubes and aluminum fins. Safety controls include a 600 psi high-pressure switch and low-temperature sensor to lock out compressor operation at extreme conditions.

For additional protection, a 7 psi (48 kPa) low-pressure switch to protect the compressor from low refrigerant charge. The low setting prevents nuisance trips while providing additional protection.

Blower Section

The blower section includes the EC motor, a direct-drive centrifugal fan, fan housing, and drain pan. A duct collar protrudes through the cabinet to facilitate field-supplied duct connection. The large size of the blower wheel allows it to rotate more slowly, reducing motor work to improve efficiency and provide for quiet operation. A large panel provides service access to the blower and motor. All blower/motor assemblies have a removable orifice ring on the housing to accommodate motor and blower removal without disconnecting the unit from the ductwork.

Disconnect Switch (Option)

SmartSource units are available with an optional non-fused disconnect switch, located on the unit front corner post. The disconnect switch is used to break power to the unit for ease of field service and is provided with a lockout/tag out feature.

Water Pressure Differential Switch (Option)

The water pressure differential switch monitors water pressure drop across the heat exchanger. Selectable as a factory mounted option it is internal to the cabinet and will disable compressor operation if flow is not detected.

Filter & Filter Rack

Units come standard with a 2" (51mm) thick factory-installed throwaway filter, mounted in a 4-sided combination filter rack and return air duct collar. Filters can be easily removed from either side by interchanging the removable filter door to the right or left side by rotating the filter rack assembly 180 degrees. A 2" or 4" filter rack is available as a factory-installed selectable option to accept a Merv 8 or Merv 13 filter. The high Merv filter rack option is available with gaskets between it and the cabinet and along the edge of the tool-less removable door. The gaskets maintain the leakage rate below 4 CFM per square foot of filter area at .5" ESP.

MicroTech® III SmartSource Unit Controller & I/O Expansion Module

The MicroTech III SmartSource controller is a microprocessor-based control board in combination with an I/O Expansion Module for extra functionality. The control box is accessible through the left or right end corner panel on horizontal units and through the bottom-front access panel on the vertical unit. The unit controller is a hard wired interface and in combination with the I/O Expansion Module provides all the necessary field connections and functionality. All components are easily accessed for service or replacement.

Figure 3: MicroTech III SmartSource unit controller and I/O expansion module

Three control choices are offered with the MicroTech III SmartSource unit control system:

- MicroTech III SmartSource unit controller with I/O Expansion Module
- MicroTech III SmartSource unit controller with I/O expansion module and a LonWORKS® communication module
- MicroTech III SmartSource unit controller with I/O expansion module and a BACnet® communication module

Each option features direct quick-connect wiring to all unit-controlled components for “clean” wiring inside the control box. Each control circuit board receives power from a 50 VA or optional 75 VA transformer. The main board can be wired for 24-volt AC output to the wall thermostat by using terminals R & C.

Built-in Diagnostics

External LED annunciations are located on the front corner of the unit chassis to quickly check the operating status of the unit. The I/O Expansion Module has an independent LED annunciation to identify operational fault conditions.

Figure 4: External LED annunciations

Fan Speed Selector Switch

A 4-position fan speed selector switch located in the control box allows CFM settings to be field adjustable. Fan speed control optimizes unit fan speed based on thermostat/room sensor inputs. The fan speed switch allows for manually setting an optimal fan speed specific to the application requirements. Each position on the fan speed switch represents settings 1-4. See [Table 1](#) below and [Table 11 on page 55](#) for a complete list of fan speed selector switch settings.

Figure 5: 4-position fan speed selector switch

Table 1: Fan speed selector switch settings (2-ton unit example)

CFM Setting	Stage 1 Heat	Stage 2 Heat	Stage 1 Cool	Stage 2 Cool	Dehumidification	Electric Heat
Setting 4 (High)	800	900	800	900	650	900
Setting 3 (Standard)	700	800	700	800	650	900
Setting 2 (Medium)	600	700	600	700	600	900
Setting 1 (Low)	600	600	600	600	600	900

Jumper Settings on I/O Expansion Module

In addition to the 4-position switch, all units have the capability to set CFM values independent to those associated with compressor operation. Independent CFM values can be set for fan only, dehumidification, waterside economizer and hydronic heat from the jumper pins JP1 and JP2 on the I/O expansion module. The jumper pin configurations represent settings A, B, C and D. See [Table 12 on page 56](#). These settings establish unique CFM settings for the four previously mentioned modes of operation. See [Table 11 on page 55](#) under the I/O Expansion Module. For example, unit size 036 with the 4-position switch set at Setting #3 and the I/O expansion module jumper set at D, will deliver 1250 CFM at stage 2 compressor operation mode, 1090 CFM at stage 1 compressor operation, 1400 CFM in electric heat mode, 700 CFM in fan only mode, 938 CFM in dehumidification mode, 700 CFM in hydronic heat mode and 940 CFM in waterside economizer mode.

Variable CFM

All units have the capability to deliver variable CFM based on the thermostat wiring. By using a multi-stage wall thermostat, the unit can deliver lower CFM as the space temperature is satisfied. For example, unit size 024 with the 4-position switch set a #3, I/O expansion module JP1/JP2 jumpers set at B and a 3-stage cooling wall thermostat will deliver 650 CFM at stage 1 cooling, 700 CFM at stage 2 cooling and 800 CFM at stage 3 cooling. All of this is accomplished by wiring the thermostat to the appropriate terminal on the MicroTech III controller terminal strip. The variable CFM feature allows for improved humidity levels by increasing latent cooling capacity through reduced CFM. Here, we are attempting to satisfy cooling at the lowest airflow, 650 CFM, but having the capability to deliver higher airflow, 800 CFM, if needed.

MicroTech® III SmartSource Controller with LONWORKS® Communication Module

Each Daikin water source heat pump can be equipped with a LONWORKS communication module that is LONMARK 3.4 certified. The controller is microprocessor-based and is designed to communicate over a LONWORKS communications network. It can be factory or field-installed.

The unit controller is programmed and tested with all the logic required to monitor and control the unit. An optional

wall sensor may be used with the communication module to provide limited local control of the Water Source Heat Pump. The unit controller monitors water and air temperatures and passes information to the communication module. The module communicates with the BAS, to provide network control of the Water Source Heat Pump.

Figure 6: MicroTech III LonWORKS snap-in communication module

The MicroTech III SmartSource unit controller with communication module includes a unit-mounted return air, discharge air and leaving water temperature sensor. Wall mounted temperature sensors include setpoint adjustment and tenant override. The user has the capability of substituting the wall sensor with a duct-mounted return air sensor.

MicroTech III SmartSource Unit Controller with LONWORKS Communication Module orchestrates the following unit operations:

- Enable heating and cooling to maintain setpoint based on a room sensor
- Enable fan and compressor operation
- Monitors all equipment protection controls
- Monitors room and discharge air temperatures
- Monitors leaving water temperature
- Relays status of all vital unit functions

The MicroTech III SmartSource unit controller with communication module includes:

- A Return Air Temperature sensor (RAT) (factory provided, field-installed)
- A Discharge Air Temperature sensor (DAT) (factory provided, field-installed)
- A Leaving Water Temperature sensor (LWT)

Note: Refer to IM 956-X for details to install (RAT), (DAT) and (LWT) sensors.

The communication module provides access to setpoints for operational control

Available wall sensors include:

- Digitally Adjustable with Temperature & Humidity Display
- Adjustable Cool/Warm with Occupancy Switch
- Adjustable 55°F to 95°F
- Adjustable -3°F to +3°F (-1.5°C to +1.5°C)
- Basic Room Sensor With Cool to Warm
- Basic Room Sensor
- Basic Sensor

MicroTech III SmartSource Controller with BACnet® Communication Module

Daikin water source heat pumps are available with a BACnet MS/TP communication module that is designed to communicate over a BACnet MS/TP communications network to a building automation system (BAS). It can be factory or field-installed.

The unit controller is programmed and tested with all the logic required to monitor and control the unit. An optional wall sensor may be used with the communication module to provide limited local control of the water source heat pump. The unit controller monitors water and air temperatures and passes information to the communication module. The module communicates with the BAS, to provide network control of the water source heat pump.

The module makes operational data and commands available on a communications network using BACnet objects and properties:

- The network cable is a shielded twisted-pair cable
- Network communications run up to 76.8 Kbps
- DIP switches on the controller enable the MS/TP MAC address to be set in the range 0-127
- Four green status LEDs on the communication module indicate communication activity on the MS/TP communication network and with the unit controller

Figure 7: MicroTech III BACnet snap-in communication module

MicroTech III SmartSource unit controller with BACnet MS/TP Communication Module orchestrates the following unit operations:

- Enable heating and cooling to maintain setpoint based on a room sensor
- Enable fan and compressor operation
- Monitors all equipment protection controls
- Monitors room and discharge air temperatures
- Monitors leaving water temperature
- Relays status of all vital unit functions

The MicroTech III SmartSource unit controller with communication module includes:

- A Return Air Temperature sensor (RAT) (factory-provided, field-installed)
- A Discharge Air Temperature sensor (DAT) (factory-provided, field-installed)
- A Leaving Water Temperature sensor (LWT)

Note: Refer to IM 956-X for details to install (RAT), (DAT) and (LWT) sensors.

The communication module provides access to setpoints for operational control.

Available wall sensors include:

- Digitally Adjustable with Temperature & Humidity Display
- Adjustable Cool/Warm with Occupancy Switch
- Adjustable 55°F to 95°F
- Adjustable -3°F to +3°F (-1.5°C to +1.5°C)
- Basic Room Sensor With Cool to Warm
- Basic Room Sensor
- Basic Sensor

Hoses, Hose Kits and Shutoff Ball Valves for SmartSource Water Source Heat Pumps

Daikin sells a variety of flexible supply, return and condensate hoses and hose assemblies for connecting its water source heat pumps to a building's hard piping system. See catalog 1196-x for the complete hose and hose kit offering.

Figure 8: Flexible, steel braided supply and return hoses

Supply and return hoses have a swivel fitting at one end to facilitate removal of the unit for replacement or service. Standard supply and return fire-rated hoses have either a thermoplastic rubber or synthetic polymer core with a braided covering of stainless steel. Fittings are either plated steel or brass.

Table 2: Available fire rated supply and return hoses

Description	Connection Size (O.D.)	Length
Supply and Return Hoses	1/2"	24"
		36"
	3/4"	24"
		36"
	1"	24"
		36"

Shutoff Ball Valves with Memory Stop

Constructed of brass and rated at 400 psig (2758 kPa) maximum working pressure. Valves have a built-in adjustable memory stop to eliminate rebalancing. Valves have FPT connections on both ends for connection to the water hose and to the field piping.

Figure 9: Shutoff ball valve with memory stop

2 & 3-Way Motorized Water Valves

2-way valves are used for variable pumping applications when more than one unit is installed on a common loop. These valves are also used to conserve water when used for ground water applications.

3-way valves are used for constant flow applications or installed at the end of a variable flow branch piping run to maintain minimum flow conditions.

Figure 10: 2-way and 3-way motorized water valves

Table 3: Available motorized valves

Type	Size	Connection
2-Way Motorized	1/2"	Sweat
	3/4"	Sweat
	1"	Sweat
	1/2"	NPT
	3/4"	NPT
	1"	NPT
3-Way Motorized	1/2"	Sweat
	3/4"	Sweat
	1"	Sweat

Supply and Return Hose Kits

Figure 11: Supply and return hoses

Supply Hose - Combination Ball Valve & Strainer

The supply valve body is a combination Y-strainer full port shut-off valve and union for use in HVAC systems. Strainers are furnished with a 20 mesh stainless steel screen, hose end drain (blow down) valve for purging, one pressure/temperature port for commissioning, and one plugged bypass port. Three additional 1/4" taps are plugged and available for accessories when specified. A variety of pipe connections are available on both the fixed and union ends. Standard end connections are female pipe thread.

Condensate Hose Kits

Horizontal ceiling units require an external condensate hose. These can be ordered as the long clear plastic type with the necessary clamps and a MPT hose fittings, or fire rated type for connection to the FPT field piping.

Table 4: Available condensate hose kits

Description	Size & Nominal Length
Hose, Fire Rated Condensate	3/4" FPT x 24"
Hose, Fire Rated Condensate	3/4" FPT x 36"
Hose, Plastic Condensate w/Fittings	3/4" x 30"
Hose, Plastic Condensate w/Fittings	3/4" x 36"

Electric Duct Heaters (Horizontal Units)

Horizontal units utilize a (field-installed) external duct-mounted electric heater. With boilerless electric heat, if the EWT is above the set point of the EWT thermostat, a switch is located in the control box to activate electric heat in the event of a compressor failure. With supplemental electric heat control the compressor and heater operate simultaneously, activated by a wall thermostat. "Emergency heat" is activated by a 24V signal for external duct-mounted electric heat. This function is activated from the wall thermostat via the "Emergency Heat" switch.

Figure 12: External electric heater (field-installed)

Table 5: Available electric duct heaters

Description	kW	Voltage/Hz/Phase	Unit Size
Electric Duct Heater Kit	5	208-240/60/1	024-030
		208-240/60/3	
		277/60/1	
		480/60/3	
	10	208-240/60/1	
		208-240/60/3	
		277/60/1	
		480/60/3	
	15	208-240/60/1	036-070
		208-240/60/3	
		277/60/1	
		480/60/3	
	20	208-230/60/1	
		208-230/60/3	
		460/60/3	
		208-230/60/1	

Filters

A 2" or 4" filter rack is available as a field-installed accessory to accept a Merv 8 or Merv 13 filter, for applications requiring optimal Indoor Air Quality (IAQ). The high Merv filter rack is provided with gaskets between it and the cabinet and along the edge of the tool-less removable door. The gaskets maintain the leakage rate below 4 CFM per square foot of filter area at .5" ESP.

Loop Circulating Pump Modules

Single pump module

Dual pump module

Features

- Fully insulated cabinet eliminates condensation
- No assembly required
- All pump modules are leak tested
- Full flow 1-1/8" brass valves
- Standard 1" NPT connections
- Compatible with all industry components
- Functions smoothly and quietly
- Easy access to valves and circulators for ease of service
- 14-3/4" x 13-1/4" x 7" unit size makes for a compact unit
- Installation hose kit available
- Five year parts & labor warranty

Operation

The circulator pumps in a geothermal loop energizes and circulates the liquid through a geothermal heat pump and the earth loop. This results in the transfer of heat.

Installation

Wall Mounting Designed for quick and easy installation, the loop pump module can be attached to most any wall using the screws and the mounting holes provided on the back flange of the pump module. External connections are standard 1" NPT to accommodate industry standard fittings.

Filling and Flushing

Filling and flushing of the pump module occurs through the connections at front. To direct flow, the module's two brass valves rotate to four positions.

Local Codes

The Daikin pump modules meet or exceed most city and state building codes, but it is recommended that installers always check local city installation requirements that may be unique to their geographic region.

Loop Pump Modules Specifications:

Single Pump Geothermal Loop Modules

Module Dimensions: 14 3/4" x 13 1/4" x 7 1/8"

Available Bell & Gossett Circulators
(All Circulators) 1 Phase 60 Hz
Cast Iron 230 VAC

Load: Low 0.6A /Med
..... 0.8A /High 1.2A

Bronze 230 VAC

Load: Low 0.6A /Med
..... 0.8A /High 1.2A

Approved Liquid Solutions:

Methanol, Exoendosol, Propylene Glycol

Additional Information:

Minimum Valve Bore: 1-1/8"
External Piping Connections 1" NPT
Maximum Operating Pressure: 150 PSI
Minimum Operating Temperature: 0°F
Maximum Operating Temperature: 225°F
Weight: 34 lbs.

Dual Pump Geothermal Loop Modules

Module Dimensions: 14 3/4" x 13 1/4" x 7 1/8"

Available Bell & Gossett Circulators

(All Circulators) 1 Phase 60 Hz
Cast Iron 230 VAC (2 pumps)
Load: Low 1.2A /Med
..... 1.6A / High 2.4A
Bronze 230 VAC (2 pumps)
Load: Low 1.2A /Med
..... 1.6A /High 2.4A

Approved Liquid Solutions:

Methanol, Exoendosol, Propylene Glycol

Additional Information:

Minimum Valve Bore: 1-1/8"
External Piping Connections 1" NPT
Maximum Operating Pressure: 150 PSI
Minimum Operating Temperature: 0°F
Maximum Operating Temperature: 225°F
Weight: 44 lbs.

Figure 13: Single pump performance curve

Figure 14: Dual pump performance curve

Typical Vertical Installation

Unit Location

SmartSource vertical water source heat pumps can be installed “free standing” in an equipment room; however, closet installations are more common for the small vertical type units. Generally, the unit is located in the corner of a closet with the non-ducted return air facing 90° to the door and the major access panels facing the door as shown in [Figure 15](#). Alternatively, the unit can have a ducted return air with the opening facing the door and the major access panels facing 90° to the door.

Locate a vertical unit to allow for easy removal of the filter and access panels. Allow a minimum of 18" (46 cm) clearance on each side of the unit for service and maintenance access. Always be sure to leave at least one side of the filter rack unobstructed so that the service personnel will be able to slide the filter out.

Install a field supplied line voltage disconnect for branch circuit protection.

To reduce noise emissions, install a field-provided 1/2 inch thick, isolator pad below the entire base of the vertical unit. The pad should be equal to the overall foot-print size of the unit to provide sound dampening of the unit while in operation.

Figure 15: Typical closet installation - non-ducted application

1. Discharge air
2. Acoustic thermal duct lining - 10 feet
3. Low voltage wiring to unit control box
4. Line voltage disconnect
5. Flexible duct collar
6. Louvered closet door
7. Condensate drain
8. Flexible, braided, stainless steel return hose with flow controller/ball valve with port
9. Flexible, braided, stainless steel supply hose with Y-strainer/ball valve with port
10. Access to unit control box
11. LED annunciation lights indicate unit operation status and faults
12. Full vibration isolation pad between unit and floor
13. Minimum distance between return air duct collar and wall for non-ducted return applications
 - Size 007-012 – 5 inches
 - Size 015-024 – 5 inches
 - Size 030-036 – 6 inches
 - Size 042-048 – 8 inches
 - Size 060-070 – 10 inches

Figure 16: Vertical unit wiring & piping locations

- B- Water return
- C- Desuperheater water return (optional)
- D- Desuperheater water supply (optional)
- E- Water supply
- F- Line voltage unit power (electric entrance)
- G- Low voltage control Wiring (electric entrance)

Typical Horizontal Installation

Unit Location

It is important to leave enough space for service personnel to perform maintenance or repair. Locate the horizontal unit to allow for easy removal of the filter and access panels. Allow a minimum of 18" (46 cm) clearance on each side of the unit for service and maintenance access and do not install the unit above any piping. Always be sure to leave at least one side of the filter rack unobstructed so that the service personnel will be able to slide the filter out. Each unit is suspended from the ceiling by four 3/8" threaded rods fastened to the unit by a hanger bracket and rubber isolator. The design should place the unit directly below the structural members so that it is securely anchored.

Avoid installing units directly above spaces where building occupants will reside (e.g. above office desks or classrooms) to reduce the requirement for noise attenuation. Do not place units above high traffic areas because service access may be limited during occupied hours. For example, units are typically installed above the hallway drop ceiling in schools and the supply and return air is routed directly into classrooms. Local code may require fire dampers to be used with this application.

Figure 17: Typical horizontal ceiling installation

Ductwork and Attenuation

Vertical Unit

All ductwork should conform to industry standards of good practice as described in ASHRAE Systems Guide. The discharge duct system will normally consist of a flexible (boot) connector at the unit, a short run of acoustically insulated duct (approximately 10'), an 90° elbow without vanes, and a trunk duct tee into a branch circuit with discharge diffusers as illustrated in [Figure 19](#) and [Figure 20](#) on page 23.

Return air ducts can be brought in through a wall grille and then to the unit. The return duct system will normally consist of a flexible connector at the unit and a trunk duct to the return air grille. With metal duct material, the return air duct should be internally lined with acoustic insulation for sound attenuation.

Return air ductwork to the unit requires a 2" (51mm) return air duct collar and filter rack or an optional 4" (102 mm) return air duct collar and filter rack.

Figure 18: Typical installation using ducted return

Horizontal Unit

Ductwork is normally applied to ceiling-mounted heat pumps on the discharge side of the unit. A discharge collar is provided on all horizontal unit models for fastening the ductwork. Use a flexible connector between the discharge collar and the duct transformation to help reduce vibration transmission from the cabinet and to simplify disconnection of the unit from the ceiling ductwork. If return ductwork is to be used, attach a flexible connector to the filter rack collar to help reduce vibration transmission and removal of the unit. Return plenum ducting should be at least 12 inches away from the coil so that the coil is evenly loaded with return air.

As a general recommendation, duct interiors should have an acoustic / thermal lining at least 1/2 inch thick over the entire duct run. For better sound attenuation, line the last five diameters of duct before each register with a one-inch thick sound blanket. Elbows, tees and dampers can create turbulence or distortion in the airflow. Place a straight length of duct, 5 to 10 times the duct width, before the next fitting to smooth out airflow. Diffusers that are located in the bottom of a trunk duct can also produce noise. For this same reason, volume control dampers should be located several duct widths upstream from an air outlet.

Figure 19: Vertical unit duct example

Figure 20: Horizontal unit duct example

Notes:

1. Do not install ducts so that the air flow is counter to fan rotation. If necessary, turn fan section.
2. Transformations and units must be adequately supported so no weight is on the flexible boot connection.

Piping

The water source heat pump unit is typically connected to the supply / return piping using a "reverse return" piping system which includes a flow control device so that flow requirements are met for each zone. A short, high pressure "flexible hose" is used to connect the unit to the building's hard piping and acts as a sound attenuator for both the unit operating noise and hydronic pumping noise. One end of the hose has a swivel fitting to facilitate removal of the unit for replacement or service. Include supply and return shutoff valves in the design to allow removal of a unit without the need to shut down the entire heat pump system. The return valve may be used for balancing and will typically have a "memory stop" so that it can be reopened to the proper position for the flow required. Fixed flow devices are commercially available and can be installed to eliminate the need for memory stop shut off valves. Include Pressure / Temperature ports to allow the service technician to measure water flow and unit operation.

Figure 21: Reverse return piping system

Daikin has available optional hose kit combinations to better facilitate system flow balancing. These flexible hoses reduce vibration between the unit and the rigid piping system.

Polyester Oil, commonly known as POE oil is a synthetic oil used in many refrigeration systems. POE oil, if ever in contact with PVC/CPVC will coat the inside wall of PVC/CPVC pipe causing environmental stress fractures.

Although there is no PVC/CPVC piping in this product, please keep this in mind when selecting piping materials for your application, as system failure and property damage could result.

Water System Quality

The cleaning, flushing and chemical treatment of a water source heat pump system is fundamental to efficient operation and the life expectancy of the system.

Potential system problems produced by the use of water fall into three general categories:

1. Scale formation – Mineral deposits which result from the crystallization and precipitation of dissolved salts in the water. The deposits form an insulating barrier, reducing the heat transfer rate and impeding the circulation of fluids due to increased pressure drop.
2. Corrosion – Decomposition of the metal caused by absorption of gases from the air. Corrosion may occur in any metal component of the system.
3. Organic growths – Slime and algae which form under certain environmental conditions, and can reduce the heat transfer rate by forming an insulating coating or can promote corrosion by pitting.

The system water should be evaluated for degrees of impurity, with testing available from independent testing labs, health departments or state agencies.

Table 6 is a list of water characteristics, the potential impurities and their results and the recommended treatment.

Avoiding Potential Problems

As shown in **Table 6**, all water contains some degree of impurities which may affect the performance of a heat pump system. The use of a cupro-nickel coil can help avoid potential problems. Water flow rates should:

- A. Be high enough that the temperature rise through the heat exchanger does not exceed 10° F when operating in the cooling mode.
- B. Not exceed 4 GPM per nominal ton. Flow rates that have velocities of 10 feet per second or more may cause pipe erosion and heat exchanger failure.

Table 6: Water impurities, result & recommended water system application

Impurity	Copper Coils	Cupro-nickel Coils	Result	Application	
				Open Recirculating	Closed Recirculating
Calcium & Magnesium Salts (hardness)	Less than 350 ppm	350 ppm Sea Water	Scaling	1. Bleed-off 2. Surface active agents such as polyphosphates. 3. Addition of acid. 4. pH adjustment. <i>Other considerations:</i> ▪ Adequate fouling factor ▪ Surface temperature ▪ Water temperature ▪ Clean system	No treatment required
Ironoxide	Low levels only	Moderate levels	Corrosion	1. Corrosion inhibitors in high concentrations (200 to 500 ppm). 2. Corrosion inhibitors in low concentrations (20 to 80 ppm). 3. pH control. 4. Proper materials of construction.	Corrosion inhibitors in high concentrations. Proper materials of construction.
pH	7 - 9	5 - 10			
Hydrogen Sulfide	Less than 10 ppm	10 - 50 ppm			
CO ₂	Less than 50 ppm	50 - 75 ppm			
Chloride	Less than 300 ppm	300 - 600 ppm	Reduced heat transfer due to forming of insulating coating, or pitting due to corrosion	Chlorinated phenols. Other biocides. Chlorine by hypochlorites or by liquid chlorine	No treatment required
Total Dissolved Solids	Less than 1000 ppm	1000 - 1500 ppm			
Slime & Algae	Slime and algae can form under certain environmental conditions		Reduced heat transfer due to forming of insulating coating, or pitting due to corrosion	Chlorinated phenols. Other biocides. Chlorine by hypochlorites or by liquid chlorine	No treatment required

- Notes:**
1. The tremendous variety in water quality around the country makes the recommendation of a single best method of treatment impossible. Consult a local water treatment specialist for specific treatment recommendations.
 2. Cupro-nickel is recommended if iron bacteria is high, suspended solids or dissolved oxygen levels are high.
 3. If the concentration of these corrosives exceeds the maximum tabulated in the cupro-nickel column, then the potential for serious corrosion problems exists.

Condensate Drain

Vertical units are factory provided with a condensate drain trap located inside the cabinet. Condensate removal piping must be pitched away from the unit not less than 1/4" per foot. A vent is required after the trap so that the condensate will drain away from the unit. The vent can also act as a clean out if the trap becomes clogged. To avoid having waste gases entering the building, the condensate drain should not be directly piped to a drain/waste/vent stack. See local codes for the correct application of condensate piping to drains.

Figure 22: Condensate trap detail

Improper trapping can lead to several problems. If the trap is too tall, negative pressure will prevent drainage, causing condensate backup. If the trap is too short the seal will be destroyed or nonexistent, producing the same effect as a non-trapped system.

Construct the trap of 7/8" clear plastic piping. The condensate piping from the drain trap must be sloped to facilitate proper drainage. The clear plastic trap should be clamped and removable for cleaning. It may be necessary to manually fill the trap at system startup, or to run the unit for sufficient time to build a condensate seal. The condensate trap and condensate piping drainage should be free of any foreign debris. Debris can prevent proper drainage and unit operation and result in condensate buildup.

Table 7: Condensate drain static pressures

Static Pressure	A	B	C
Standard	1-1/4"	5/8"	2-3/4"
High	1-1/2"	3/4"	3-1/8"

Operating Limits

Air Limits

Table 8: Air limits in °F (°C)

Air Limits	Standard Range Units		Extended Range (Geothermal) Units	
	Cooling	Heating	Cooling	Heating
Minimum Ambient Air ¹	50°F (10°C)	50°F (10°C)	40°F (4°C)	40°F (4°C)
Maximum Ambient Air ²	100°F/77°F (38°C/25°C)	85°F (29°C)	100°F/77°F (38°C/25°C)	85°F (29°C)
Minimum Entering Air ¹	65°F/55°F (18°C/13°C)	50°F (10°C)	65°F/55°F (18°C/13°C)	50°F (10°C)

Fluid Limits

Table 9: Fluid limits

Fluid Limits	Standard Range Units		Extended Range (Geothermal) Units	
	Cooling	Heating	Cooling	Heating
Minimum Entering Fluid	55°F (13°C)	55°F (13°C)	30°F (-1°C)	20°F (-6°C)
Common Design Entering Fluid	85-90°F (29-32°C)	70°F (21°C)	90°F (32°C)	35-60°F (1.5-16°C)
Maximum Entering Fluid	120°F (43°C)	90°F (32°C)	120°F (43°C)	90°F (32°C)
Minimum GPM/Ton			1.5	
Nominal GPM/Ton			3.0	
Maximum GPM/Ton			4.0	

- Notes:**
1. Maximum and minimum values may not be combined. If one value is at maximum or minimum, the other two conditions may not exceed the normal condition for standard units. Extended (Geothermal) range units may combine any two maximum conditions, but not more than two, with all other conditions being normal conditions.
 2. This is not a normal or continuous operating condition. It is assumed that such a start-up is for the purpose of bringing the building space up to occupancy temperature.

Unit Selection

Achieving optimal performance with water source heat pump systems requires both accurate system design and proper equipment selection. Use a building load program to determine the heating and cooling loads of each zone prior to making equipment selections. With this information, the Daikin SelectTools™ software selection program for Water Source Heat Pumps can be used to provide fast, accurate and complete selections of all water source heat pump products. SelectTools software is available by contacting your local Daikin Representative.

While it is recommended that you use SelectTools software for all unit selections, manual selections can be accomplished using the same zone load information and the capacity tables available in this catalog.

Boiler/Tower (Water Loop) Application:

The following example illustrates a typical selection for a unit in a boiler/tower system for a commercial building.

The load in this zone requires 41,099 Btuh of total cooling, 30,327 Btuh of sensible cooling and 37,758 Btuh of total heating. The entering water temperatures for the design conditions are 90°F for cooling and 70°F for heating. The return air temperature is 80°F dry bulb with 67°F wet bulb and 70°F for heating.

Zone Requirement:

Total Cooling Load	=	41,099 Btuh
Sensible Cooling Load	=	30,327 Btuh
Heating Load	=	37,758 Btuh
Design Air Flow	=	1,200 CFM
Return Air - Cooling	=	80°F DB/67°F WB
Return Air - Heating	=	70°F DB
Water Flow (Based on Cooling)	=	10.5 GPM

Since a Model GS *036 produces approximately 36,100 total cooling and 27,000 Btuh sensible cooling capacity, it is not sufficient for this zone and a model GS *042 should be considered.

Selection:

Model..... GS *042

After making the preliminary selection (GS*042) enter the performance from the tables on [page 46](#) and [page 47](#) at the design conditions and read Total Cooling, Sensible Cooling, and Heating Capacity at 10.5 GPM:

Total Cooling Capacity	=	43,500 Btuh
Sensible Cooling Capacity	=	31,400 Btuh
Heating Capacity	=	50,600 Btuh

Note: The above performances are based on 1,400 CFM; therefore, the capacities need to be adjusted to reflect the unit performance at the zone required CFM.

Determine the air flow correction factors from [Table 14 on page 57](#). For this example use Air Flow Setting #2 (1225 CFM):

$$\text{Corrected Total Cooling} = 43,500 \times 0.987 = 42,935 \text{ Btuh}$$

$$\text{Corrected Sensible Cooling} = 31,400 \times 0.952 = 29,893 \text{ Btuh}$$

$$\text{Corrected Total Heating} = 50,600 \times 0.991 = 50,145 \text{ Btuh}$$

Compare the corrected Total Cooling, Corrected Sensible Cooling, and the Corrected Total Heating figures to the Zone requirements.

Since the sensible capacity is slightly less than the design sensible load, judgment must be used to determine if the next larger capacity unit is necessary. Oversized equipment should be avoided to minimize the potential for humidity and comfort issues.

Next, determine the power correction factors from [Table 14 on page 57](#) using Air Flow Setting #2 (1225 CFM):

$$\text{Corrected Cooling Input Power} = 2.835 \times 0.968 = 2.744 \text{ kW}$$

$$\text{Corrected Heating Input Power} = 2.989 \times 0.996 = 2.977 \text{ kW}$$

The resulting efficiencies can be determined using the corrected capacities and input power:

$$\text{EER} = \text{Cooling Capacity (Btuh)} \div \text{Input Power (Watts)}$$

$$\text{EER} = 42,935 \text{ Btuh} \div (2.744 \text{ kW} \times 1000) = 15.7$$

$$\text{COP} = \text{Heating Capacity (Watts)} \div \text{Input Power (Watts)}$$

$$\text{COP} = (50,145 \text{ Btuh} \div 3.412) \div (2.977 \text{ kW} \times 1000) = 4.94$$

Geothermal (Ground Loop) Application:

The following example illustrates the same zone in a geothermal application.

The space requirements for the zone are the same as the previous example – 41,099 Btuh of total cooling and 30,327 Btuh of sensible cooling and 37,758 Btuh of heating. Geothermal loop software programs are available to help determine the size of the loop field based on:

- Desired entering water temperatures for the system.
- Specific loop field design criteria based on acreage available, loop field spacing, vertical bore depth, piping selected, flow rates, circulated heat transfer fluid, and local formation geology for the loop which produces specific min./max. loop temperatures for the unit selection.

Entering fluid temperatures for geothermal systems can be as high as 110°F and as low as 20°F. Design entering fluid temperatures for heating and cooling are selected by the design engineer based on building loads, ground temperatures, and soil conditions. Typical design entering fluid temperatures are 90°F for cooling (summer) and 45°F for heating (winter). As a rule of thumb, the design entering fluid temperature for cooling is 10°F below the maximum outdoor air temperature, and the design entering fluid temperature for heating is 40°F above the minimum outdoor air temperature. Water flow rates are typically 2.5 to 3.0 GPM per ton and the use of antifreeze is recommended in most northern applications.

Zone Requirement:

Total Cooling Zone	= 41,099 Btuh
Sensible Cooling Zone	= 30,327 Btuh
Heating Zone	= 37,758 Btuh
Design Air Flow	= 1,200 CFM
Return air – Cooling	= 80°F DB/67°F WB
Return air – Heating	= 70°F

Entering Fluid Temperature - Cooling = 100°F

Entering Fluid Temperature - Heating = 45°F

A Model GS *042 is chosen for this geothermal application. Model "GS" offers insulated water piping for condensation considerations and a different freeze stat setting to allow entering fluid temperatures down to 20°F (with antifreeze). Output capacities should be recalculated using the antifreeze correction tables shown on [page 64](#). The Model GS *042 is first considered but may not meet the Zone requirements due to the reduced entering fluid temperatures (45°F) and an antifreeze solution of 20% propylene Glycol.

Selection:

Model GS *042

From the capacity tables on [page 46](#) & [page 47](#).

Total cooling capacity = 41,400 Btuh

Table Sensible cooling = 30,500 Btuh

Total heating capacity = 38,550 Btuh

Next, determine the airflow and antifreeze correction factors.

Corrected Capacity = Capacity Table Data × Air Flow Correction × Antifreeze Correction

$$\begin{aligned} \text{Corrected Total Cooling} &= 41,400 \times 0.987 \times 0.980 \\ &= 40,045 \text{ Btuh} \end{aligned}$$

$$\begin{aligned} \text{Corrected Sensible Cooling} &= 30,500 \times 0.952 \times 0.980 \\ &= 28,455 \text{ Btuh} \end{aligned}$$

$$\begin{aligned} \text{Corrected Heating Capacity} &= 38,550 \times 0.991 \times 0.975 \\ &= 37,248 \text{ Btuh} \end{aligned}$$

Since the sensible capacity is slightly less than the design sensible load, judgment must be used to determine if the next larger capacity unit is necessary. Oversized equipment should be avoided to minimize the potential for humidity and comfort issues.

Next, determine the power correction factors from [Table 11 on page 55](#) using Air Flow Setting #2 (1225 CFM):

$$\text{Corrected Cooling Input Power} = 3.165 \times 0.968 = 3.064 \text{ kW}$$

$$\text{Corrected Heating Input Power} = 2.679 \times 0.996 = 2.668 \text{ kW}$$

The resulting efficiencies can be determined using the corrected capacities and corrected input power:

$$\text{EER} = \text{Cooling Capacity (Btuh)} \div \text{Input Power (Watts)}$$

$$\text{EER} = 40,045 \text{ Btuh} \div (3.064 \text{ kW} \times 1000) = 13.1$$

$$\text{COP} = \text{Heating Capacity (Watts)} \div \text{Input Power (Watts)}$$

$$\text{COP} = (37,248 \text{ Btuh} \div 3.412) \div (2.668 \text{ kW} \times 1000) = 4.09$$

* - indicates Vertical or Horizontal configuration.

Loop Pump Application and Selection

The SmartSource loop pump package is intended for systems designed specifically for distributed or decentralized pump applications eliminating the need for central pumping systems. These systems can be applied to geothermal or boiler/tower applications. However, geothermal applications tend to be more common since system head losses can be better managed to suite the system design requirements. To do so, attention must be given to minimize head loss in the piping system. These recommendations include:

- Minimize head loss in headers and unit flex hose connections to less than 4 ft. per 100 ft of pipe
- Vertical bore length should be limited to:
 - 200 ft. for 3/4" HDPE U-tube pipe
 - 300 ft. for 1" HDPE U-tube pipe
 - 500 ft. for 1 1/4" HDPE U-tube pipe

Notes: 1. Unit head loss should not exceed 12 ft. of water.
2. Use ball or butterfly valves to minimize head loss.
3. Do not use flow control devices such as Circuit Sentry™ flow regulating valves Control valves, if necessary, Cv should be greater than or equal to the unit flow rate.

The benefit of a decentralized system can be realized by minimizing head loss while allowing the SmartSource loop pump(s) to cycle on when there is a call for heating or cooling. This allows the loop pump(s) to remain off during the unit off-cycle. In a typical 40-hour per week operating schedule, a significant portion of the energy consumed by a central pumping systems occurs during unoccupied periods due to reduced pump efficiencies at part load.

However, lower annual energy consumption can be realized with the decentralized SmartSource loop pump(s) when head loss and operating hours are minimized.

The maximum working pressure is 145 psi or 335 ft. of water. As a result, this pump system must be limited to mid-rise building applications of no more than approximately 30 stories high. Excessive working pressure can damage the pump seals and reduce the pump operating life. An intermediate heat exchanger should be considered for high-rise building applications to limit static pressures to no more than 145 psi or 335 ft. of water.

When selecting an appropriate SmartSource loop pump, the working fluid (water plus antifreeze), total head loss and flow must be known. The following represents the typical total head loss calculation for a decentralized geothermal loop pump application:

- Using nominal 2-ton vertical unit W.GTV.1.026
- Fluid – 15% Methanol Solution in Water
- Design EWT Heating - 35°F

(Maximum pressure drop occurs with high density fluid. As a result, the design heating EWT will be used to calculate the Total Head Loss)

- Design Water Flow – 3 gpm/ton or 6 gpm for a 2-ton unit
- Length of 1" HDPE piping between the unit and the loop field manifold – 40 feet of length
- Geothermal Loop – (1) 1" HDPE U-tube - 300 feet bore depth

Component	Head Loss (Ft. of W.C.)
1" HDPE Piping and Elbows	2.3
Geothermal Loop Piping	8.6
Unit – W.GTV.1.026	5.5
Total	16.4

Figure 25: System & pump curve for one, low head pump option

For the design conditions of 6 gpm and a total head loss of 16.4 Ft., select the single pump option. The system curve and pump curve for this selection is shown in Figure 25. As a result, the actual calculated flow will be 7.56 gpm with a head on the pump of 28 ft. Applications with higher head loss may require the (one) high head pump option or one of the two-pump options using either (two) low head pumps or (two) high head pumps option, piped in series. Pumps piped in series provide approximately double the head capability compared to single pump systems. Also see "Loop Pump Performance" curves on page 58.

Tint = Operation Not Recommended

Notes:

1. Operation below 40°F EWT is based upon a 15% methanol anti-freeze solution.
2. Performance stated is at the rated power supply; performance may vary as the power supply varies from the rated.
3. See performance correction tables for operating conditions other than those listed.
4. Interpolation is permissible; extrapolation is not.
5. For performance data outside the EAT listed, refer to the Daikin SelectTools selection program.
6. Table does not reflect fan or pump power corrections for AHRI/ISO conditions.
7. Data is base on unit at full load operation.

Tint = Operation Not Recommended

Notes:

1. Operation below 40°F EWT is based upon a 15% methanol anti-freeze solution.
2. Performance stated is at the rated power supply; performance may vary as the power supply varies from the rated.
3. See performance correction tables for operating conditions other than those listed.
4. Interpolation is permissible; extrapolation is not.
5. For performance data outside the EAT listed, refer to the Daikin SelectTools selection program.
6. Table does not reflect fan or pump power corrections for AHRI/ISO conditions.
7. Data is base on unit at full load operation.

Tint = Operation Not Recommended

Notes:

1. Operation below 40°F EWT is based upon a 15% methanol anti-freeze solution.
2. Performance stated is at the rated power supply; performance may vary as the power supply varies from the rated.
3. See performance correction tables for operating conditions other than those listed.
4. Interpolation is permissible; extrapolation is not.
5. For performance data outside the EAT listed, refer to the Daikin SelectTools selection program.
6. Table does not reflect fan or pump power corrections for AHRI/ISO conditions.
7. Data is base on unit at full load operation.

- Tint = Operation Not Recommended
- Notes:**
1. Operation below 40°F EWT is based upon a 15% methanol anti-freeze solution.
 2. Performance stated is at the rated power supply; performance may vary as the power supply varies from the rated.
 3. See performance correction tables for operating conditions other than those listed.
 4. Interpolation is permissible; extrapolation is not.
 5. For performance data outside the EAT listed, refer to the Daikin SelectTools selection program.
 6. Table does not reflect fan or pump power corrections for AHRI/ISO conditions.
 7. Data is base on unit at full load operation.

- Tint = Operation Not Recommended
- Notes:**
1. Operation below 40°F EWT is based upon a 15% methanol anti-freeze solution.
 2. Performance stated is at the rated power supply; performance may vary as the power supply varies from the rated.
 3. See performance correction tables for operating conditions other than those listed.
 4. Interpolation is permissible; extrapolation is not.
 5. For performance data outside the EAT listed, refer to the Daikin SelectTools selection program.
 6. Table does not reflect fan or pump power corrections for AHRI/ISO conditions.
 7. Data is base on unit at full load operation.

Size 024 (800 CFM)

- Tint = Operation Not Recommended
- Notes:**
1. Operation below 40°F EWT is based upon a 15% methanol anti-freeze solution.
 2. Performance stated is at the rated power supply; performance may vary as the power supply varies from the rated.
 3. See performance correction tables for operating conditions other than those listed.
 4. Interpolation is permissible; extrapolation is not.
 5. For performance data outside the EAT listed, refer to the Daikin SelectTools selection program.
 6. Table does not reflect fan or pump power corrections for AHRI/ISO conditions.
 7. Data is base on unit at full load operation.

Tint = Operation Not Recommended

Notes:

1. Operation below 40°F EWT is based upon a 15% methanol anti-freeze solution.
2. Performance stated is at the rated power supply; performance may vary as the power supply varies from the rated.
3. See performance correction tables for operating conditions other than those listed.
4. Interpolation is permissible; extrapolation is not.
5. For performance data outside the EAT listed, refer to the Daikin SelectTools selection program.
6. Table does not reflect fan or pump power corrections for AHRI/ISO conditions.
7. Data is base on unit at full load operation.

- Tint = Operation Not Recommended
- Notes:**
1. Operation below 40°F EWT is based upon a 15% methanol anti-freeze solution.
 2. Performance stated is at the rated power supply; performance may vary as the power supply varies from the rated.
 3. See performance correction tables for operating conditions other than those listed.
 4. Interpolation is permissible; extrapolation is not.
 5. For performance data outside the EAT listed, refer to the Daikin SelectTools selection program.
 6. Table does not reflect fan or pump power corrections for AHRI/ISO conditions.
 7. Data is base on unit at full load operation.

- Tint = Operation Not Recommended
- Notes:**
1. Operation below 40°F EWT is based upon a 15% methanol anti-freeze solution.
 2. Performance stated is at the rated power supply; performance may vary as the power supply varies from the rated.
 3. See performance correction tables for operating conditions other than those listed.
 4. Interpolation is permissible; extrapolation is not.
 5. For performance data outside the EAT listed, refer to the Daikin SelectTools selection program.
 6. Table does not reflect fan or pump power corrections for AHRI/ISO conditions.
 7. Data is base on unit at full load operation.

- Tint = Operation Not Recommended
- Notes:**
1. Operation below 40°F EWT is based upon a 15% methanol anti-freeze solution.
 2. Performance stated is at the rated power supply; performance may vary as the power supply varies from the rated.
 3. See performance correction tables for operating conditions other than those listed.
 4. Interpolation is permissible; extrapolation is not.
 5. For performance data outside the EAT listed, refer to the Daikin SelectTools selection program.
 6. Table does not reflect fan or pump power corrections for AHRI/ISO conditions.
 7. Data is base on unit at full load operation.

Tint = Operation Not Recommended

Notes:

1. Operation below 40°F EWT is based upon a 15% methanol anti-freeze solution.
2. Performance stated is at the rated power supply; performance may vary as the power supply varies from the rated.
3. See performance correction tables for operating conditions other than those listed.
4. Interpolation is permissible; extrapolation is not.
5. For performance data outside the EAT listed, refer to the Daikin SelectTools selection program.
6. Table does not reflect fan or pump power corrections for AHRI/ISO conditions.
7. Data is base on unit at full load operation.

Tint = Operation Not Recommended

Notes:

1. Operation below 40°F EWT is based upon a 15% methanol anti-freeze solution.
2. Performance stated is at the rated power supply; performance may vary as the power supply varies from the rated.
3. See performance correction tables for operating conditions other than those listed.
4. Interpolation is permissible; extrapolation is not.
5. For performance data outside the EAT listed, refer to the Daikin SelectTools selection program.
6. Table does not reflect fan or pump power corrections for AHRI/ISO conditions.
7. Data is base on unit at full load operation.

Fan Performance – Constant Torque EC Motor

Notes: ¹ The unit is capable of high-low fan performance through the use of a 2-stage thermostat wired to specific terminals for High-Low CFM fan performance. Standard operation with a 1-stage thermostat is indicated as High CFM fan performance.

² Applications up to 1.0" ESP (in. wg.) are possible. However, increased fan noise should be anticipated and appropriate noise attenuation should be considered.

Table 12: I/O expansion module jumper configuration

I/O Expansion board configuration		
Setting	JP1	JP2
A	Open	Open
B	Shorted	Open
C	Open	Shorted
D	Shorted	Shorted

Figure 26: JP1 & JP2 location on the I/O expansion module

Jumper Settings on I/O Expansion Module

In addition to the 4-position switch, all units have the capability to set CFM values independent to those associated with compressor operation. Independent CFM values can be set for fan only, dehumidification, waterside economizer and hydronic heat from the jumper pins JP1 and JP2 on the I/O expansion module. The jumper pin configurations represent settings A, B, C and D. See [Table 12](#). These settings establish unique CFM settings for the four previously mentioned modes of operation. See [Table 11 on page 55](#) under the I/O Expansion Module. For example, unit size 036 with the 4-position switch set at Setting #3 and the I/O expansion module jumper set at D, will deliver 1250 CFM at stage 2 compressor operation mode, 1090 CFM at stage 1 compressor operation, 1400 CFM in electric heat mode, 700 CFM in fan only mode, 938 CFM in dehumidification mode, 700 CFM in hydronic heat mode and 940 CFM in waterside economizer mode.

Air Flow Correction Factors

Table 13: Air flow correction factors – sizes 007-012

Unit Size	Air Flow		Cooling			Heating	
	CFM/Nominal Ton	% of Nominal	Total Capacity	Sensible Capacity	Power Input	Total Capacity	Power Input

Antifreeze

Table 27: Antifreeze correction factors

	Antifreeze % by weight			
	15%	25%	35%	45%
Ethanol				
Cooling Capacity	0.985	–	–	–
Heating Capacity	0.9825	–	–	–
Pressure Drop	1.04	–	–	–
Ethyleneglycol				
Cooling Capacity	0.9935	0.9895	0.985	0.981
Heating Capacity	0.9865	0.9795	0.973	0.965
Pressure Drop	1.10	1.16	1.22	1.27
Methanol				
Cooling Capacity	0.985	–	–	–
Heating Capacity	0.9825	–	–	–
Pressure Drop	1.04	–	–	–
Propylene Glycol				
Cooling Capacity	0.985	0.975	0.965	0.955
Heating Capacity	0.981	0.9685	0.952	0.936
Pressure Drop	1.11	1.20	1.31	1.40

Formula:

$$\Delta P = SL \left(\frac{QL}{Cv} \right)^2$$

Where:

Cv – Valve (Flow) coefficient for valves

QL – Liquid flow in gallons per minute (GPM)

Qg – Rate of gas flow in cubic feet per minute at standard conditions, 14.7 PSIA and 60°F (SCFM)

P1 – Absolute inlet pressure (PSIA)

P1 = Gauge pressure (PSIG) + 14.7

P – Pressure drop in pounds per square inch (PSI)

SL – Specific gravity of flowing liquid relative water at 60°F

Sg – Specific gravity of gas relative to air.

T – Absolute temperature in degrees Rankine, (°R)

T = °F+460

Vertical Units

Table 28: Unit sizes 007 through 030

Description	Unit Size						
	007	009	012	015	019	024	030

Horizontal Unit

General

Units shall be supplied completely factory assembled, piped, internally wired, fully charged with R-410A and capable of operation with an entering water temperature range from 55°F to 120°F on water loop models, 20°F to 120°F on geothermal ground loop and ground water models. All equipment must be rated and certified in accordance with ARI / ISO 13256-1 and must be tested, investigated, and determined to comply with the requirements of the standards for Heating and Cooling Equipment UL-1995 for the United States and CAN/CSA-C22.2 NO.236 for Canada. The units shall have AHRI/ISO and ETL-US-C labels. Each unit shall be run tested at the factory. The installing contractor shall be responsible for furnishing and installing Daikin Water Source Heat Pumps as indicated on the plans and per installation instructions.

Electrical

A control box shall be located within the unit and shall contain controls for compressor, reversing valve and fan motor operation and shall have either, a 50VA or 75VA transformer and a terminal block for low voltage field wiring connections. Unit shall be name-plated to accept time delay fuses or HACR circuit breaker for branch over-current protection of the power source. Unit control system shall provide heating or cooling as required by the set points of the wall thermostat. The unit control scheme shall provide for fan operation simultaneous with compressor operation (fan interlock) regardless of the thermostat type. The unit shall be capable of providing an output signal to an LED on the thermostat or to a central monitoring panel to indicate a "fault" condition from the activation of any one of the safety switches.

Casing and Cabinet

The outer cabinet shall be powder-coat painted as standard color textured paint.

- **Factory-installed option:** Unpainted cabinet
- **Factory-installed option:** Powder-coat painted color "off white"

Cabinets shall have separate openings and knockouts for entrance of line voltage and low voltage control wiring. Supply and return water connections shall be FPT fittings and shall be securely mounted flush to the cabinet corner post allowing for connection to a flexible hose without the use of a back-up wrench.

It is the installing contractor's responsibility to provide sufficient clearance so that units can be easily removed for servicing.

The cabinet shall be fabricated from heavy gauge G-60 galvanized sheet metal with interior surfaces lined with the following insulation options:

Standard insulation in the compressor compartment shall be 1/2" fiberglass – multicoated type. Standard insulation on the air side shall be 1/2" fiberglass cleanable foil faced type with edges sealed or tucked in order to prevent introduction of fibers into the discharge air. Standard cabinet insulation must meet NFPA 90A requirements, air erosion and mold growth limits of UL-181, fungal resistance test per ASTM-C1071 and ASTM G21, and shall meet zero level bacteria growth per ASTM G22. All insulation shall have a flame spread of less than 25 and a smoke developed classification of less than 50 per ASTM E-84 and UL 723.

- **Factory-installed option 1:** Standard Insulation Package
 - 1/2-inch fiberglass skin-face in compressor section, 1/2-inch foil-face insulation in airside section
- **Factory-installed option 2 :** Indoor Air Quality Insulation Package
 - 3/8-inch closed cell foam in compressor and airside sections
- **Factory-installed option 3 : Sound Reduction Package**
 - 3/4-inch sound sound insulation in compressor and airside sections (Unit Sizes 007 - 019)
 - 1/2-inch fiberglass skin-face in compressor section with compressor sound blanket and 3/4-inch sound insulation in airside section (Unit Sizes 024 - 070)
- **Factory-installed unit application options:**
 - Water Loop (WL)-14°F suction line temp sensor with no insulation on refrigerant lines or coax or water lines
 - Ground Water (GW)-14°F suction line temp sensor with closed cell insulated refrigerant lines, coaxial condenser, and water lines
 - Ground Loop (GL)-7°F suction line temp sensor with closed cell insulated refrigerant lines, coaxial condenser, and water lines

Airflow Configurations

Units shall be configured in one of the following airflow arrangements:

- Left Return/End Discharge
- Left Return/Straight Discharge
- Right Return/End Discharge
- Right Return/Straight Discharge

Units shall have a factory-installed, 4-sided, 1" duct flange on the discharge of the blower to allow connection of field ductwork and must have a minimum of two access panels, one for the compressor compartment and one for the blower compartment. Unit shall have an insulated panel separating the blower compartment from the compressor compartment. Units are to ship with heavy metal brackets, rubber isolators, fasteners and washers to suspend and isolate the unit from the building.

Stainless Steel Drain Pan

Unit shall utilize corrosion resistant closed-cell insulated stainless steel drain pans. A stub out connection shall be provided. The drain pan shall be designed to ensure no pooling of condensate water per ASHRAE 62.2. The unit will be supplied with solid-state electronic condensate overflow protection as standard. Mechanical float switches will not be accepted.

Filter Rack and Filters

Unit shall come standard with a 2-inch disposable filter and a 2-inch, 4-sided factory-installed combination filter rack/return air duct collar. The filters shall be removable from either side of the unit.

As selectable options, unit shall have a 2-inch thick MERV 8 OR 4 inch MERV 13 filter, factory-installed with a 2-inch or 4- inch factory-installed combination filter rack/return air duct collar.

The optional factory-installed hi-MERV seal shall provide a leakage rate of less than 4 CFM per square foot of filter area at .5" ESP.

As factory installed options, units shall be available with no filter and filter rack, or no filter.

All filter racks shall be 4-sided with door and duct collar.

Fan and Motor Assembly

The fan shall be a centrifugal, direct drive type, utilizing a variable speed EC fan motor with soft start. The Fan motor shall be isolated from the housing by rubber isolation grommets, and shall be permanently lubricated and have thermal overload protection. The fan housing shall have a removable orifice ring to facilitate removal of the fan motor and fan wheel assembly, and the fan housing shall protrude through the cabinet to facilitate a field-supplied duct connection.

The EC motor shall maintain constant CFM over its static operating range. The fan and motor assembly must be capable of overcoming the external static pressures as shown on the schedule.

For unit sizes 015 – 070, the constant CFM EC motor shall deliver precise speed and economical performance up to the maximum published static pressure. Unit sizes 007 – 012 shall utilize a constant torque EC motor type.

Field adjustable air flow from an easily accessible 4-speed selector switch, located in the unit control box, shall allow for manual setting of the optimal fan speed specific to the application.

Disconnect Switch

This factory-installed option shall include the addition of a 3-pole switch mounted on the unit. The switch shall have a lockout/tag out feature. The switch shall be rated to be added to all units to handle the unit only (not to include units with optional factory-mounted electric heat). The switch shall be rated to handle all the voltages available for the unit. (460/3/60 requires 4-wire power service).

Water Pressure Differential Switch

Available as a factory installed option, a pressure differential switch monitoring the water pressure drop across the heat exchanger shall be factory mounted internal to the cabinet and shall disable compressor operation if flow is not detected.

Refrigerant Circuit

Units shall have a sealed refrigerant circuit, which includes a non-CFC depleting R-410A refrigerant [rotary (sizes 007 – 019), and scroll compressors (sizes 024 to 070)]. In addition, each unit will have a thermostatic expansion valve, an aluminum fin and rifled copper tube refrigerant-to-air heat exchanger, a reversing valve and a water-to-refrigerant coaxial heat exchanger. The coaxial coils shall be made of [copper] [or optional cupronickel] and shall be deeply fluted to enhance heat transfer and minimize fouling and scaling. The coaxial coil shall have a working pressure of 500 psig on the waterside of the unit and 600 psig on the refrigerant side for all R-410A units.

The compressor shall have a dual level vibration isolation system. The compressor will be mounted on vibration isolation grommets to a heavy gauge compressor mounting plate, which is then isolated from the cabinet base with rubber grommets to minimize vibration transfer. Compressor shall have thermal overload protection. Compressor shall be located in an insulated compartment away from air stream to minimize sound transmission.

Refrigerant metering shall be regulated by a thermostatic expansion valve (TXV) only. Reversing valve shall be four-way solenoid activated refrigerant valve, which fails in the cooling "dominant" operation. Safety controls include a high-pressure switch, a low-pressure switch, and a low refrigerant temperature sensor. Refrigerant gauge access fittings shall be factory-installed on high and low pressure refrigerant lines to facilitate field service. Activation of any safety switch shall prevent the compressor from operating.

All air coils shall be coated with an optional inorganic, silicon-based nano-ceramic coating that must pass a ASTM B117 3,000 hour salt spray test to provide protection against corrosion due to acids, solvents, and salt found in the environment.

Hot Gas Reheat Smart Dehumidification Option

The optional factory-installed hot gas reheat coil shall be used as part of a dehumidification operating sequence. Hot gas reheat shall be enabled when the space humidity level is above a user selectable set point, typically, 50 to 55% RH. Superheated refrigerant gas shall be diverted to the reheat coil and unit fan shall operate at dehumidification fan speed upon a call for dehumidification. This option includes a hot gas reheat coil and a solenoid actuated 3-way valve. Coil shall be proof and leak tested. A corrosion resistant coated hot gas reheat coil shall be available as an option.

Simplified Dehumidification Option

Available as a factory-installed option, unit shall be configured to allow for maximum latent capacity while decreasing room humidity levels by optimizing blower fan speed for dehumidification. Option requires a thermostat with a minimum of 2 cooling stages.

Humidistat Controlled Dehumidification Option

Available as a factory-installed option, unit shall be configured to allow for maximum latent capacity while decreasing room humidity levels by optimizing blower fan speed for dehumidification. Option requires a humidistat as well as a thermostat with a minimum of 1 cooling stage.

Dehumidification Always Option

Available as a factory-installed option, for cooling only applications, this option shall utilize a humidistat only. Upon a call from the humidistat, the unit shall be configured to run at dehumidification blower speed combined with maximum compressor speed, allowing for maximum latent capacity.

Waterside Economizer

A factory mounted and wired waterside economizer shall consist of a hydronic cooling coil located between the unit filter rack and evaporator, a 2-position 3-way diverting valve, a manual air vent, and an entering fluid sensor. The waterside economizer outer cabinet shall be powder-coat painted with standard color textured paint. The cabinet shall be fabricated from heavy gauge G-60 galvanized sheet metal with interior surfaces lined with a minimum 3/8-inch thick closed-cell non-fibrous IAQ insulation. Components shall be accessible without removing economizer. An insulated stainless steel drain pan compliant with ASHRAE 62.1 including electronic condensate overflow protection shall be provided. Economizer flush mounted piping connections shall be on the same side as the WSHP unit piping connections. Hose kits shall be provided for field connection of economizer to WSHP unit. For corrosive environment applications, a corrosion resistant coated coil shall be available.

The unit mounted control system shall allow economizer operation for either supplemental to mechanical unit cooling or independent, based on entering fluid temperature and refrigerant suction temperature operating conditions. Economizer operation shall be permitted when entering fluid temperature is below 55°F yet adjustable between 70°F to 50°F. Economizer operation shall be initiated from a 3-stage wall mounted thermostat or room temperature sensor. Economizer operation shall not be permitted when entering fluid temperature is below 35°F.

Motorized Water Isolation Valves

The optional 2-way motorized isolation valve shall be factory-installed inside the compressor compartment. The valve actuator shall be factory wired to the Micro-Tech III SmartSource controller and be controlled when there is a call for heating or cooling. The valve shall have an end switch to ensure valve is fully open prior to compressor operation.

External Loop Pump(s)

This option includes the addition of an externally mounted water pump on unit sizes 2 tons and larger. Single pump or dual pumps available. Pumps shall be piped in series. The pump(s) shall be able to produce nominal GPM (3 GPM/ton) and be able to overcome the internal pressure drop of the coax heat exchanger, plus 30 feet additional water pressure drop with 25% PG antifreeze solution.

Sound Package

Available as a factory installed option, unit sizes 024 – 070 shall utilize sound attenuating compressor blankets combined with high technology sound attenuating material that is strategically applied within the air handling compartment to further reduce sound transmitted by the unit while in operation. Unit sizes 007 – 019 shall have sound attenuating material in the compressor compartment in lieu of a compressor blanket. Compressor sound blanket is not recommended on a unit with a rotary compressor.

Water Pressure Differential Switch

Available as a factory installed option, a pressure differential switch monitoring the water pressure drop across the heat exchanger shall be factory mounted internal to the cabinet and shall disable compressor operation if flow is not detected.

Coaxial Coil Supply Liquid Auto Flow Regulator

This factory-installed option includes the addition of an automatic flow control valve to set and limit the GPM through the unit. The valve shall have a “replaceable cartridge” capability. The valve shall be rated for 600 psig. Note: This option will not be available with External Water Pump option.

Solid-State Control System

MicroTech III SmartSource Control System - Unit shall have a microprocessor-based control system. The unit control logic shall provide cooling, heating, smart dehumidification, and/or economizer operation as required by the thermostat and/or sensor. The control system shall provide the following for stand-alone operation:

1. The use of standard non-programmable or programmable wall thermostats.
2. Fan operation simultaneous with the compressor (fan interlock) regardless of thermostat logic.
3. Time delay compressor operation.
4. Compressor short cycle protection of a minimum of three minutes before restart is possible.
5. Random unit start-up
6. Single grounded wire connection for activation of the unoccupied or unit shutdown modes.
7. Night setback temperature setpoint input signal from the wall thermostat.
8. Override signal from wall thermostat to override unoccupied mode for 2 hours.
9. Brownout protection to suspend unit operation if the supply voltage drops below 80% of normal.
10. Condensate overflow protection to suspend cooling operation in an event of a full drain pan.
11. Suspended compressor operation upon activation of the refrigerant pressure switch(es).
12. Cooling operation activated for 60 seconds upon activation of the freeze fault or compressor low suction temperature alarms - defrost cycle.
13. Method of defeating compressor, reversing valve and fan time delays for fast service diagnostics.
14. Remote Alarm reset - Provides ability to remotely reset the unit upon a fault condition.
15. Fault Retry clears faults the first two times they occur within a 24-hour period and triggers automatic lock-out on third fault.
16. Control shall be configurable to accommodate thermostat or sensor based control.

Smart Fan Controls

All units shall have the capability of lowering the CFM as the space temperature approaches the thermostat setpoint, through smart fan controls. Smart fan controls shall allow variable airflow control, based on the call for 1st and 2nd stage heating or cooling.

Cooling Mode – On an initial call for cooling, the fan shall be energized at its “fan only” setting. After a 0 to 30 second random delay, the compressor and fan will start at the stage 1 cooling settings. If room setpoint conditions are not satisfied, the compressor and fan will operate at the stage 2 cooling settings. When the room setpoint conditions are satisfied, the compressor will shut off and the fan will operate according to its “fan

only” setting, when enabled for continuous fan operation. If fan cycling is enabled, the fan will turn off once room setpoint conditions are satisfied.

Heating Mode – On an initial call for heating, the fan shall energize at its “fan only” setting. After a 0 to 30 second random delay, the reversing valve is energized after 60 seconds, the compressor and fan will start at stage 1 heating settings. If room setpoint conditions are not satisfied, the compressor and fan will operate at stage 2 heating settings. When the room setpoint conditions are satisfied, the compressor will shut off and the fan will operate according to its “fan only” setting, when enabled for continuous fan operation. If fan cycling is enabled, the fan will turn off once room setpoint conditions are satisfied. The reversing valve will be de-energized 60 seconds later.

Smart Dehumidification Mode – (Optional for unit equipped with hot gas reheat) Uses hot gas reheat, a humidistat, a 2-stage thermostat and air flow management for precise humidity control. When the cooling and heating temperature setpoint is satisfied and there is a call for dehumidification, maximum dehumidification is initiated by energizing the fan at its “fan only” setting, energizing the pump request, energizing the 45 second proof-of-flow timer, energizing the hot gas reheat solenoid valve, energizing the compressor at maximum cooling, and energizing the fan at the dehumidification setting. When the room humidity conditions are satisfied, the compressor will shut off and the fan will operate according to its “fan only” setting, when enabled for continuous fan operation. If fan cycling is enabled, the fan will turn off once room humidity conditions are satisfied.

Supplemental Electric Heat Mode – (Optional for unit equipped with supplemental electric heat). On a call for heating, the fan will energize at its “fan only” setting, the pump request will energize, the 45 second flow timer will start. After the flow, compressor minimum off, and random startup timers are expired, the compressor and fan will start at stage 1 heating settings; the reversing valve shall energize 5 seconds after the compressor turns on. If room setpoint conditions are not satisfied, the fan will operate at stage 2 heating settings. If room setpoint conditions are still not satisfied, the compressor will continue to operate and stage 1 electric heat will be energized and the fan will operate at its electric heat setting. For units equipped with 2 stages of electric heat, if room setpoint conditions are still not satisfied, the second stage of electric heat will be energized and the fan will continue to operate at its electric heat setting. When the room setpoint conditions are satisfied, electric heat will be de-energized allowing the compressor to remain on if necessary to maintain room setpoint conditions. The fan will operate according to its “fan only” setting when enabled, for continuous fan operation. If fan cycling is enabled, the fan will turn off once room setpoint conditions are satisfied.

MicroTech™ III SmartSource Control with LON-Works communication module – Unit shall have a microprocessor-based control system. The unit control logic shall communicate over a LonMARK communications network. The unit controller is factory programmed [LonMARK® 3.4 certified Application Code the current standard for new applications] and tested with all the logic required to monitor and control heating and cooling operation. The controller sets the unit mode of operation, monitors water and air temperatures, and can communicate fault conditions via a LonMARK communications network. Units with the MicroTech III and LonWorks communication module include return air, discharge air and leaving water temperature sensors. Space temperature sensor options include a set-point adjustment, tenant override button, and the capability of substituting the return air sensor with a wall-mounted room sensor.

MicroTech III SmartSource Control w/ BACnet Communication Module – Unit shall have a microprocessor-based control system. The unit control logic shall communicate over a BACnet communications network. The BACnet communication module shall incorporate an Atmel ARM7 Thumb series MCU and be capable of supporting a full MSTP BACnet implementation. The microprocessor shall also support SPI compatible communications with

the MCU of the MicroTech III SmartSource controller. The physical interface to a BACnet BAS network shall be through an industry standard RS-485 transceiver capable of existing on an RS-485 network of up to 64 nodes. The unit controller is factory programmed and tested with all the logic required to monitor and control heating and cooling operation. The controller sets the unit mode of operation, monitors water and air temperatures, and can communicate fault conditions via a BACnet communications network. Units outfitted with Microtech III and BACnet communication modules include return air, discharge air and leaving water temperature sensors. Space temperature sensor options include a set-point adjustment, tenant override button, and the capability of substituting the return air sensor with a wall-mounted room temperature sensor.

Each communicating unit controller performs the following unit operations:

- Enable heating and cooling to maintain space temperature set point at the room sensor
- Enable fan and compressor operation
- Monitor all safety controls
- Monitor discharge and return air temperature
- Monitor leaving water temperature
- Relay status of all vital unit functions
- Support optional control outputs

Unit mounted LED annunciators aid in diagnosing unit operation by indicating the water source heat pump operating mode and alarm conditions. If there are no current alarm conditions, a green LED on the annunciator board will indicate occupied unit operating mode. If an alarm condition exists, the MicroTech III unit controller will send the fault condition to the LED annunciator, which will assist in troubleshooting the unit. Heat pumps with the MicroTech III Unit Controller with a LonWorks Communication Module is designed to be linked with a centralized Building Automation System (BAS) through a LonMARK communications network for centralized scheduling and management of multiple heat pumps. Wall-mounted room sensors are available to control the operation of each MicroTech III Water Source Heat Pump.

Warranty

- An optional 2, 3, or 4-year extended compressor warranty covers the compressor from the date at which the unit ships from the factory.
- An optional 2, 3, or 4-year extended refrigeration circuit warranty covers the entire refrigeration circuit and related components for 5 years.

Field Installed Accessories

Wall-Mounted Thermostats:

- Programmable Touch Screen Thermostat
 - 1. Optional Remote Room Sensor
 - 2. Optional Outdoor Temperature Sensor
- Non-Programmable Thermostat
 - 1. Optional Remote Room Sensor
- Programmable Thermostat
 - 1. Optional Remote Room Sensor

Wall-Mounted Room Temperature Sensors for BACnet and LonWorks Communications:

- Digitally Adjustable Wall Sensor with Temperature and Humidity Display
- Adjustable Cool/Warm with Occupancy Switch, Override/Reset Button, Status LED, Fan and System Switch
- Adjustable 55°-95°F and 12°-33°C, Override/Reset Button, Status LED, Fan and System Switch
- Adjustable -5°F to +5°F and -21°C to -15°C, Override/Reset Button, Status LED, Fan and System Switch
- Basic Sensor, Override/Reset Button, Status LED

Humidistat

To be used in conjunction with one of the dehumidification options. Humidistat to be wall mounted and capable of providing solid state input to unit controls to enable/disable dehumidification features.

Hose Kits

Supply and Return Hose Kits

Two fire-rated flexible hoses with ASTM ratings of Flame Spread 25, Fuel Contribution 25 and Smoke Density 50 for connection to unit and field piping. Hose shall be covered with stainless steel braiding to prevent damage.

The automatic flow hose kit shall include an automatic flow control valve, two ball valves, two flexible hoses, a high flow Y-strainer, and may include a strainer blow-down and various other accessories. The automatic flow control valve shall be factory set to a rated flow, and shall automatically control the flow to within 10% of the rated value over a 40 to 1 differential pressure, operating range (2 to 80 PSID). Operational temperature shall be rated from fluid freezing, to 225°F. The valve body shall be constructed from hot forged brass UNS C37700 per ASTM B-283 latest revision.

Jumper Hose Kit (Used with Waterside

Economizer and Hydronic Heat)

The jumper hose kit used with waterside economizer and hydronic heat shall include a single UL-94 VO fire rated hose with 1-inch male JIC x 90 degree male pipe plated steel adapter.

Condensate Hose Kits

- Optional plastic hose including fittings
- Optional fire-rated, braided steel hose including fittings

Valve Options

- Optional 2-way, Normally Open (N.O.) or Normally Closed (N.C.) motorized valves.
- Optional 2-way, mechanical ball valve

Replacement Filters

2-inch MERV 8, 4 inch MERV 13, and 2-inch disposable filters shall be available as direct replacement to factory-installed filters.

Electric Heat Coils

An optional 5, 10, 15, or 20 kW field installed duct heater shall be available. These heaters will require a field provided power source. 15 and 20 kW heaters shall be 2-stage.

Vertical Unit

General

Units shall be supplied completely factory assembled, piped, internally wired, fully charged with R-410A and capable of operation with an entering water temperature range from 55°F to 110°F on water loop models, 30°F to 110°F on geothermal ground loop and ground water models. All equipment must be rated and certified in accordance with ARI / ISO 13256-1 and must be tested, investigated, and determined to comply with the requirements of the standards for Heating and Cooling Equipment UL-1995 for the United States and CAN/CSA-C22.2 NO.236 for Canada. The units shall have AHRI/ISO and ETL-US-C labels. Each unit shall be run tested at the factory. The installing contractor shall be responsible for furnishing and installing Daikin Water Source Heat Pumps as indicated on the plans and per installation instructions.

Electrical

A control box shall be located within the unit and shall contain controls for compressor, reversing valve and fan motor operation and shall have either, a 50VA or 75VA transformer and a terminal block for low voltage field wiring connections. Unit shall be name-plated to accept time delay fuses or HACR circuit breaker for branch over-current protection of the power source. Unit control system shall provide heating or cooling as required by the set points of the wall thermostat. The unit control scheme shall provide for fan operation simultaneous with compressor operation (fan interlock) regardless of the thermostat type. The unit shall be capable of providing an output signal to an LED on the thermostat or to a central monitoring panel to indicate a "fault" condition from the activation of any one of the safety switches.

Casing and Cabinet

The outer cabinet shall be powder-coat painted as standard color textured paint.

- Factory-installed option: Unpainted cabinet
- Factory-installed option: Powder-coat painted color "off white"

Cabinets shall have separate openings and knockouts for entrance of line voltage and low voltage control wiring. Supply and return water connections shall be FPT fittings and shall be securely mounted flush to the cabinet corner post allowing for connection to a flexible hose without the use of a back-up wrench.

It is the installing contractor's responsibility to provide sufficient clearance so that units can be easily removed for servicing.

The cabinet shall be fabricated from heavy gauge G-60 galvanized sheet metal with interior surfaces lined with the following insulation options:

Standard insulation in the compressor compartment shall be 1/2" fiberglass – multicoated type. Standard insulation on the air side shall be 1/2" fiberglass cleanable foil faced type with edges sealed or tucked in order to prevent introduction of fibers into the discharge air. Standard cabinet insulation must meet NFPA 90A requirements, air erosion and mold growth limits of UL-181, fungal resistance test per ASTM-C1071 and ASTM G21, and shall meet zero level bacteria growth per ASTM G22. All insulation shall have a flame spread of less than 25 and a smoke developed classification of less than 50 per ASTM E-84 and UL 723.

- **Factory-installed option 1:** Standard Insulation Package
 - 1/2-inch fiberglass skin-face in compressor section, 1/2-inch foil-face insulation in airside section
- **Factory-installed option 2:** Indoor Air Quality Insulation Package
 - 3/8-inch closed cell foam in compressor and air-side sections
- **Factory-installed option 3:** Sound Reduction Package
 - 3/4-inch sound sound insulation in compressor and airside sections (Unit Sizes 007 - 019)
 - 1/2-inch fiberglass skin-face in compressor section with compressor sound blanket (Unit Sizes 024 - 070) and 3/4-inch sound insulation in airside section
- **Factory-installed unit application options:**
 - Water Loop (WL)-14°F suction line temp sensor with no insulation on refrigerant lines or coax or water lines
 - Ground Water (GW)-14°F suction line temp sensor with closed cell insulated refrigerant lines, coaxial condenser, and water lines
 - Ground Loop (GL)-7°F suction line temp sensor with closed cell insulated refrigerant lines, coaxial condenser, and water lines

Airflow Configurations

Units shall be configured in one of the following airflow arrangements:

- Left Return/Top Discharge
- Right Return/Top Discharge

Units shall have a factory-installed, 4-sided, 1" duct flange on the discharge of the blower to allow connection of field ductwork and must have a minimum of two access panels, one for the compressor compartment and one for the blower compartment. Unit shall have an insulated panel separating the blower compartment from the compressor compartment. Units are to ship with heavy metal brackets, rubber isolators, fasteners and washers to suspend and isolate the unit from the building.

Stainless Steel Drain pan

Unit shall utilize corrosion resistant closed-cell insulated stainless steel drain pans. A stub out connection shall be provided. The drain pan shall be designed to ensure no pooling of condensate water per ASHRAE 62.2. The unit will be supplied with solid-state electronic condensate overflow protection as standard. Mechanical float switches will not be accepted.

Filter Rack and Filters

Unit shall come standard with a 2-inch disposable filter and a 2-inch, 4-sided factory-installed combination filter rack/return air duct collar. The filters shall be removable from either side of the unit.

As selectable options, unit shall have a 2-inch thick MERV 8 OR 4-inch MERV 13 filter, factory-installed with a 2-inch or 4-inch factory-installed combination filter rack/return air duct collar.

The optional factory-installed hi-MERV seal shall provide a leakage rate of less than 4 CFM per square foot of filter area at .5" ESP.

As factory installed options, units shall be available with no filter and filter rack, or no filter.

All filter racks shall be 4-sided with door and duct collar.

Fan and Motor Assembly

The fan shall be a centrifugal, direct drive type, utilizing a variable speed EC fan motor with soft start. The Fan motor shall be isolated from the housing by rubber isolation grommets, and shall be permanently lubricated and have thermal overload protection. The fan housing shall have a removable orifice ring to facilitate removal of the fan motor and fan wheel assembly, and the fan housing shall protrude through the cabinet to facilitate a field-supplied duct connection.

The EC motor shall maintain constant CFM over its static operating range. The fan and motor assembly must be capable of overcoming the external static pressures as shown on the schedule.

For unit sizes 015 – 070, the constant CFM EC motor shall deliver precise speed and economical performance up to the maximum published static pressure. Unit sizes 007 – 012 shall utilize a constant torque EC motor type.

Field adjustable air flow from an easily accessible 4-speed selector switch, located in the unit control box, shall allow for manual setting of the optimal fan speed specific to the application.

Water Pressure Differential Switch

Available as a factory installed option, a pressure differential switch monitoring the water pressure drop across the heat exchanger shall be factory mounted internal to the cabinet and shall disable compressor operation if flow is not detected.

Refrigerant Circuit

Units shall have a sealed refrigerant circuit, which includes a non-CFC depleting R-410A refrigerant [rotary (sizes 007-019), and scroll compressors (sizes 024 to 070)]. In addition, each unit will have a thermostatic expansion valve, an aluminum fin and rifled copper tube refrigerant-to-air heat exchanger, a reversing valve and a water-to-refrigerant coaxial heat exchanger. The coaxial coils shall be made of [copper] [or optional cupronickel] and shall be deeply fluted to enhance heat transfer and minimize fouling and scaling. The coaxial coil shall have a working pressure of 500 psig on the waterside of the unit and 600 psig on the refrigerant side for all R-410A units.

The compressor shall have a dual level vibration isolation system. The compressor will be mounted on vibration isolation grommets to a heavy gauge compressor mounting plate, which is then isolated from the cabinet base with rubber grommets to minimize vibration transfer. Compressor shall have thermal overload protection. Compressor shall be located in an insulated compartment away from air stream to minimize sound transmission.

Refrigerant metering shall be regulated by a thermostatic expansion valve (TXV) only. Reversing valve shall be four-way solenoid activated refrigerant valve, which fails in the cooling "dominant" operation. Safety controls include a high-pressure switch, a low-pressure switch, and a low refrigerant temperature sensor. Refrigerant gauge access fittings shall be factory-installed on high and low pressure refrigerant lines to facilitate field service. Activation of any safety switch shall prevent the compressor from operating.

All air coils shall be coated with an optional inorganic, silicon-based nano-ceramic coating that must pass a ASTM B117 3,000 hour salt spray test to provide protection against corrosion due to acids, solvents, and salt found in the environment.

Electric Heat Coils

The optional 5, 10, 15, or 20 kW electric heat coil shall be factory-installed inside the unit cabinet, be integral to the supply fan housing and be used as boilerless, supplemental, primary, or emergency heat. 15 and 20 kW heaters shall be 2-stage.

Desuperheater

The optional desuperheater (Unit sizes 024 – 070) shall be factory-installed in the compressor compartment and used to add supplemental heating, using superheated refrigerant gas through a tube-in-tube heat exchanger to the domestic hot water supply. Water lines shall be fastened to the exterior panel with flush mounted brass NPT fittings.

- Factory-Installed Option: The desuperheater pump shall be factory-installed inside the unit. (Voltage 208-230/60/1 and 208-230/60/3 only)

Hydronic Heat Option

The factory installed hydronic heating option shall provide control of a factory installed two position valve connected to a hot water coil and shall operate when loop water temperature is warm enough for hydronic heating. Loop water temperature is sensed by a factory installed entering water temperature sensor located on the inlet water line. Hydronic heat circuit shall be independent and substitute the use of the compressor driven refrigeration circuit. Hydronic heating setpoint allowed range is 70°F to 120°F, with a 70°F default value.

Hot Gas Reheat Smart Dehumidification Option

The optional factory-installed hot gas reheat coil shall be used as part of a dehumidification operating sequence. Hot gas reheat shall be enabled when the space humidity level is above a user selectable set point, typically, 50 to 55% RH. Superheated refrigerant gas shall be diverted to the reheat coil and unit fan shall operate at dehumidification fan speed upon a call for dehumidification. This option includes a hot gas reheat coil and a solenoid actuated 3-way valve. Coil shall be proof and leak tested. A corrosion resistant coated hot gas reheat coil shall be available as an option.

Simplified Dehumidification Option

Available as a factory-installed option, unit shall be configured to allow for maximum latent capacity while decreasing room humidity levels by optimizing blower fan speed for dehumidification. Option requires a thermostat with a minimum of 3 cooling stages.

Humidistat Controlled Dehumidification Option

Available as a factory-installed option, unit shall be configured to allow for maximum latent capacity while decreasing room humidity levels by optimizing blower fan speed for dehumidification. Option requires a humidistat as well as a thermostat with a minimum of 2 cooling stages.

Dehumidification Always Option

Available as a factory-installed option, for cooling only applications, this option shall utilize a humidistat only. Upon a call from the humidistat, the unit shall be configured to run at dehumidification blower speed combined with maximum compressor speed, allowing for maximum latent capacity.

Waterside Economizer

A factory mounted and wired waterside economizer shall consist of a hydronic cooling coil located between the unit filter rack and evaporator, a 2-position 3-way diverting valve, a manual air vent, and an entering fluid sensor. The waterside economizer outer cabinet shall be powder-coat painted with standard color textured paint. The cabinet shall be fabricated from heavy gauge G-60 galvanized sheet metal with interior surfaces lined with a minimum 3/8-inch thick closed-cell non-fibrous

IAQ insulation. Components shall be accessible without removing economizer. An insulated stainless steel drain pan compliant with ASHRAE 62.1 including electronic condensate overflow protection shall be provided. Economizer flush mounted piping connections shall be on the same side as the WSHP unit piping connections. Hose kits shall be provided for field connection of economizer to WSHP unit. For corrosive environment applications, a corrosion resistant coated coil shall be available.

The unit mounted control system shall allow economizer operation for either supplemental to mechanical unit cooling or independent, based on entering fluid temperature and refrigerant suction temperature operating conditions. Economizer operation shall be permitted when entering fluid temperature is below 55°F yet adjustable between 70°F to 50°F. Economizer operation shall be initiated from a 3-stage wall mounted thermostat or room temperature sensor. Economizer operation shall not be permitted when entering fluid temperature is below 35°F.

Motorized Water Isolation Valves

The optional 2-way motorized isolation valve shall be factory-installed inside the compressor compartment. The valve actuator shall be factory wired to the Micro-Tech III SmartSource controller and be controlled when there is a call for heating or cooling. The valve shall have an end switch to ensure valve is fully open prior to compressor operation.

External Loop Pump(s)

This option includes the addition of an externally mounted water pump on unit sizes 2 tons and larger. Single pump or dual pumps available. Pumps shall be piped in series. The pump(s) shall be able to produce nominal GPM (3 GPM/ton) and be able to overcome the internal pressure drop of the coax heat exchanger , plus 30 feet additional water pressure drop with 25% PG antifreeze solution.

Disconnect Switch

This factory-installed option shall include the addition of a 3-pole switch mounted on the unit. The switch shall have a lockout/tag out feature. The switch shall be rated to be added to all units to handle the unit only (not to include units with optional factory-mounted electric heat). The switch shall be rated to handle all the voltages available for the unit. (460/3/60 requires 4-wire power service)

Sound Package

Available as a factory installed option, unit sizes 024 – 070 shall utilize sound attenuating compressor blankets combined with high technology sound attenuating material that is strategically applied within the air handling compartment to further reduce sound transmitted by the unit while in operation. Unit sizes 007 – 019 shall have sound attenuating material in the compressor compartment in lieu of a compressor blanket. Compressor sound blanket is not recommended on a unit with a rotary compressor.

Water Pressure Differential Switch

Available as a factory installed option, a water pressure differential switch monitoring the water pressure drop across the heat exchanger shall be factory mounted internal to the cabinet and shall disable compressor operation if flow is not detected.

Coaxial Coil Supply Liquid Auto Flow Regulator

This factory-installed option includes the addition of an automatic flow control valve to set and limit the GPM through the unit. The valve shall have a "replaceable cartridge" capability. The valve shall be rated for 600 psig. (Note: This option will not be available with External Loop Pump option.)

Solid-State Control System

MicroTech III SmartSource Control System - Unit shall have a microprocessor-based control system. The unit control logic shall provide cooling, heating, smart dehumidification, and/or economizer operation as required by the thermostat and/or sensor. The control system shall provide the following for stand-alone operation:

1. The use of standard non-programmable or programmable wall thermostats.
2. Fan operation simultaneous with the compressor (fan interlock) regardless of thermostat logic.
3. Time delay compressor operation.
4. Compressor short cycle protection of a minimum of three minutes before restart is possible.
5. Random unit start-up
6. Single grounded wire connection for activation of the unoccupied or unit shutdown modes.
7. Night setback temperature setpoint input signal from the wall thermostat.
8. Override signal from wall thermostat to override unoccupied mode for 2 hours.
9. Brownout protection to suspend unit operation if the supply voltage drops below 80% of normal.
10. Condensate overflow protection to suspend cooling operation in an event of a full drain pan.
11. Suspended compressor operation upon activation of the refrigerant pressure switch(es).
12. Cooling operation activated for 60 seconds upon activation of the low suction temperature sensor - defrost cycle.
13. Method of defeating compressor, reversing valve and fan time delays for fast service diagnostics.
14. Remote Alarm reset - Provides ability to remotely reset the unit upon a fault condition.
15. Fault Retry clears faults the first two times they occur within a 24-hour period and triggers automatic lock-out on third fault.
16. Control shall be configurable to accommodate thermostat or sensor based control.

Smart Fan Controls

All units shall have the capability of lowering the CFM as the space temperature approaches the thermostat setpoint, through smart fan controls. Smart fan controls shall allow variable airflow control, based on the call for 1st and 2nd stage heating or cooling.

Cooling Mode – On an initial call for cooling, the fan shall be energized at its "fan only" setting. After a 0 to 30 second random delay, the compressor and fan will start at the stage 1 cooling settings. If room setpoint conditions are not satisfied, the compressor and fan will operate at the stage 2 cooling settings. When the room setpoint conditions are satisfied, the compressor will shut off and the fan will operate according to its "fan only" setting, when enabled for continuous fan operation. If fan cycling is enabled, the fan will turn off once room setpoint conditions are satisfied.

Heating Mode – On an initial call for heating, the fan shall energize at its "fan only" setting. After a 0 to 30 second random delay, the reversing valve is energized after 60 seconds, the compressor and fan will start at stage 1 heating settings. If room setpoint conditions are not satisfied, the compressor and fan will operate at stage 2 heating settings. When the room setpoint conditions are satisfied, the compressor will shut off and the fan will operate according to its "fan only" setting, when enabled for continuous fan operation. If fan cycling is enabled, the fan will turn off once room setpoint conditions are satisfied. The reversing valve will be de-energized 60 seconds later.

Smart Dehumidification Mode – (Optional for unit equipped with hot gas reheat) Uses hot gas reheat, a humidistat, a 2-stage thermostat and air flow management for precise humidity control. When the cooling and heating temperature setpoint is satisfied and there is a call for dehumidification, maximum dehumidification is initiated by energizing the fan at its "fan only" setting, energizing the pump request, energizing the 45 second proof-of-flow timer, energizing the hot gas reheat solenoid valve, energizing the compressor at maximum cooling, and energizing the fan at the dehumidification setting. When the room humidity conditions are satisfied, the compressor will shut off and the fan will operate according to its "fan only" setting, when enabled for continuous fan operation. If fan cycling is enabled, the fan will turn off once room humidity conditions are satisfied.

Supplemental Electric Heat Mode – (Optional for unit equipped with supplemental electric heat). On a call for heating, the fan will energize at its “fan only” setting, the pump request will energize, the 45 second flow timer will start. After the flow, compressor minimum off, and random startup timers are expired, the compressor and fan will start at stage 1 heating settings; the reversing valve shall energize 5 seconds after the compressor turns on.

If room setpoint conditions are not satisfied, the fan will operate at stage 2 heating settings. If room setpoint conditions are still not satisfied, the compressor will continue to operate and stage 1 electric heat will be energized and the fan will operate at its electric heat setting. For units equipped with 2 stages of electric heat, if room setpoint conditions are still not satisfied, the second stage of electric heat will be energized and the fan will continue to operate at its electric heat setting. When the room setpoint conditions are satisfied, electric heat will be de-energized allowing the compressor to remain on if necessary to maintain room setpoint conditions. The fan will operate according to its “fan only” setting when enabled, for continuous fan operation. If fan cycling is enabled, the fan will turn off once room setpoint conditions are satisfied.

MicroTech® III Control with LonWorks Communication Module – Unit shall have a microprocessor-based control system. The unit control logic shall communicate over a LONMARK communications network. The unit controller is factory programmed [LONMARK® 3.4 certified Application Code the current standard for new applications] and tested with all the logic required to monitor and control heating and cooling operation. The controller sets the unit mode of operation, monitors water and air temperatures, and can communicate fault conditions via a LONMARK communications network. Units with the MicroTech III and LonWorks communication module include return air, discharge air and leaving water temperature sensors. Space temperature sensor options include a set-point adjustment, tenant override button, and the capability of substituting the return air sensor with a wall-mounted room sensor.

MicroTech III SmartSource Control w/ BACnet Communication Module – Unit shall have a microprocessor-based control system. The unit control logic shall communicate over a BACnet communications network. The BACnet communication module shall incorporate an Atmel ARM7 Thumb series MCU and be capable of supporting a full MSTP BACnet implementation. The microprocessor shall also support SPI compatible communications with the MCU of the MicroTech III SmartSource controller. The physical interface to a BACnet BAS network shall be through an industry standard RS-485 transceiver capable of existing on an RS-485 network of up to 64 nodes. The unit controller is factory programmed and tested with all the logic required to monitor and control heating and cooling operation. The controller sets the unit mode of operation, monitors

water and air temperatures, and can communicate fault conditions via a BACnet communications network. Units outfitted with Microtech III and BACnet Communication modules include return air, discharge air and leaving water temperature sensors. Space temperature sensor options include a set-point adjustment, tenant override button, and the capability of substituting the return air sensor with a wall-mounted room temperature sensor.

Each communicating unit controller performs the following unit operations:

- Enable heating and cooling to maintain space temperature set point at the room sensor
- Enable fan and compressor operation
- Monitor all safety controls
- Monitor discharge and return air temperature
- Monitor leaving water temperature
- Relay status of all vital unit functions
- Support optional control outputs

Unit mounted LED annunciators aid in diagnosing unit operation by indicating the water source heat pump operating mode and alarm conditions. If there are no current alarm conditions, a green LED on the annunciator board will indicate occupied unit operating mode. If an alarm condition exists, the MicroTech III SmartSource unit controller will send the fault condition to the LED annunciator, which will assist in troubleshooting the unit. Heat pumps with the MicroTech III SmartSource unit controller with a LonWorks Communication Module is designed to be linked with a centralized Building Automation System (BAS) through a LONMARK communications network for centralized scheduling and management of multiple heat pumps.

Wall-mounted room sensors are available to control the operation of each MicroTech III Water Source Heat Pump.

Warranty

- An optional 1-year extended compressor warranty covers the compressor for 2 years from the date at which the unit ships from the factory.
- An optional 1-year extended refrigeration circuit warranty covers the entire refrigeration circuit and related components for 2 years
- An optional 1-year extended complete parts warranty covers all parts components for 2 years.
- An optional 4-year extended compressor warranty covers the compressor for 5 years from the date at which the unit ships from the factory.
- An optional 4-year extended refrigeration circuit warranty covers the entire refrigeration circuit and related components for 5 years
- An optional 4-year extended complete parts warranty covers all parts components for 5 years.

In addition to the above warranties an optional 1st year labor allowance is available.

When an extended 4 year complete parts warranty is selected, an optional 5 year labor allowance is available.

Field Installed Accessories

Wall-Mounted Thermostats:

- Programmable Touch Screen Thermostat
 1. Optional Remote Room Sensor
 2. Optional Outdoor Temperature Sensor
- Non-Programmable Thermostat
 1. Optional Remote Room Sensor
- Programmable Thermostat
 1. Optional Remote Room Sensor

Wall Mounted Room Temperature Sensors for BACnet and LonWorks Communications:

- Digitally Adjustable Wall Sensor with Temperature and Humidity Display
- Adjustable Cool/Warm with Occupancy Switch, Override/Reset Button, Status LED, Fan and System Switch
- Adjustable 55°F to 95°F and 12°C to 33°C, Override/Reset Button, Status LED, Fan and System Switch
- Adjustable -5°F to +5°F and -21°C to -15°C, Override/Reset Button, Status LED, Fan and System Switch
- Basic Sensor, Override/Reset Button, Status LED

Humidistat

To be used in conjunction with one of the dehumidification options. Humidistat to be wall mounted and capable of providing solid state input to unit controls to enable/disable dehumidification features.

Hose Kits

Supply and Return Hose Kits

Two fire-rated flexible hoses with ASTM ratings of Flame Spread 25, Fuel Contribution 25 and Smoke Density 50 for connection to unit and field piping. Hoses shall be covered with stainless steel braiding to prevent damage.

The automatic flow hose kit shall include an automatic flow control valve, two ball valves, two flexible hoses, a high flow Y-strainer, and may include a strainer blow-down and various other accessories. The automatic flow control valve shall be factory set to a rated flow, and shall automatically control the flow to within 10% of the rated value over a 40 to 1 differential pressure, operating range (2 to 80 PSID). Operational temperature shall be rated from fluid freezing, to 225°F. The valve body shall be constructed from hot forged brass UNS C37700 per ASTM B-283 latest revision.

Jumper Hose Kit (Used with Waterside Economizer & Hydronic Heat)

The jumper hose kit used with waterside economizer and hydronic heat shall include a single UL-94 VO fire rated hose with 1-inch male JIC x 90 degree male pipe plated steel adapter.

Condensate Hose Kits

- Optional plastic hose including fittings
- Optional fire-rated, braided steel hose including fittings

Valve Options

- Optional 2-way, Normally Open (N.O.) or Normally Closed (N.C.) motorized valves
- Optional 2-way, mechanical ball valve

Replacement Filters

2-inch MERV 8, 4 inch MERV 13, and 2-inch disposable filters shall be available as direct replacement to factory-installed filters.

Electric Heat Coils

An optional 5, 10, 15, or 20 kW field installed duct heater shall be available. These heaters will require a field provided power source. 15 and 20 kW heaters shall be 2-stage.

Appendix-A

Capacity table legend:

Btu/hr = British Thermal Units per Hour

CFM = Airflow Rate, Cubic Feet per Minute

COP = Coefficient of Performance

EAT = Entering Air Temperature

EER = Energy Efficiency Ratio

EWT = Entering Water Temperature

Ft of W.C. = Feet of Water Column

GPM = Gallons per Minute

kW = Kilowatts

LAT = Leaving Air Temperature

PSI = Pounds per Square Inch

THA = Total Heat of Absorption

THR = Total Heat of Rejection

APD = Air Pressure Drop

WPD = Waterside Pressure Drop

[◀ BACK TO Capacity Data Tables beginning on page 30.](#)

Appendix-B

Hydronic coil performance table:

Legend: Capacity is based on 68/59°F entering air.

Air PD is air pressure drop in inches of water column wet coil.

WPD is water side pressure drop in feet of water. Coil pressure drop only.

[◀ BACK TO "Hydronic Coil Performance" on page 61.](#)

Appendix-C

Note: EC motors on 460/60/3 volt units require a 265 volt power supply. Both a hot AND a neutral wire are required to obtain proper fan motor voltage. Therefore, 4-wires with a wye type wiring arrangement is required.

Daikin Applied Training and Development

Now that you have made an investment in modern, efficient Daikin Applied equipment, its care should be a high priority. For training information on all Daikin Applied HVAC products, please visit us at www.DaikinApplied.com and click on Training, or call 540-248-9646 and ask for the Training Department.

Warranty

All Daikin Applied equipment is sold pursuant to its standard terms and conditions of sale, including Limited Product Warranty. Consult your local Daikin Applied representative for warranty details. Refer to Form 933-430285Y. To find your local Daikin Applied representative, go to www.DaikinApplied.com.

Aftermarket Services

To find your local parts office, visit www.DaikinApplied.com or call 800-37PARTS (800-377-2787). To find your local service office, visit www.DaikinApplied.com or call 800-432-1342.

This document contains the most current product information as of this printing. For the most up-to-date product information, please go to www.DaikinApplied.com.

Products manufactured in an ISO Certified Facility.
